A Novel Study of Hazard Identification and Risk Assessment in Textile Industry

Mr. R. Vigneshwar[1], Mr. S. Karthikeyan[2]
[1]*Post graduate student,* [2]*Assistant Professor, Department of Industrial Safety Engineering, Erode Sengunthar Engineering College, Thudupathi, Erode, Tamilnadu-638057*

Abstract: ***The work environment of textiles is risky and portrayed by different simultaneous chemical, physical and mechanical hazard exposure, which would prompt wounds of textile labourers. Health risks from working in the textile industry. This manuscript contains the details on the hazards and risk level present in one of south India's leading textile industry. This study also briefs about the need, method and result of the HIRA technique. The HIRA technique is adopted in the old rotary printing department and dyeing department to assess the risk levels in terms of quantified values. The control measures were also developed for each area and activities identified with potential safety issues. It is found that the identified hazards majorly categorized under Physical, chemical, ergonomics, material handling, health and electrical hazards. The risk level is quantified for all the hazards in the printing and dyeing department by multiplying the values of severity and probability.***
Keywords: Risk, Hazards, textile, dyeing, health, severity

I. INTRODUCTION

Hazard Identification and Risk Assessment (HIRA) deals with the identification and quantification of risks that are exposed to, due to accidents resulting from the hazards present or handling of hazardous substances in the workplace.

This involves Hazard analysis which essentially is identification and quantification of the various hazards that are likely to occur in the industry as well as quantification of the consequences due to a particular hazard.

The risk analysis estimates the probability as well as severity of a particular hazard over an exposed group of people, plant equipment or both.

For any industry to be successful, it has to be safe, reliable, and sustainable in its operations. The industry has to identify the hazards and assess the associated risks and to bring the risks to tolerable level.

Hazard Identification and Risk Assessment (HIRA) is carried for identification of undesirable events that can lead to a hazard, the analysis of hazard of this undesirable event, that could occur and usually the estimation of its extent, magnitude, and likelihood of harmful effects.

It is widely accepted within industry in general that the various techniques of risk assessment contribute greatly toward improvements in the safety of complex operations and equipment.

The objective of this work of hazards and risk analysis is to identify and analyse hazards, the event sequences leading to hazards and the risk associated with hazardous events.

Many techniques ranging from the simple qualitative methods to the advanced quantitative methods are available to help identify and analyse hazards.

The use of multiple hazard analysis techniques is recommended because each has its own purpose, strengths, and weaknesses.

HIRA assists in identifying the most likely hazards which can have significant impact on workplace safety in an industry.

It helps in devising effective management measures as well as engineering measures for both preventive as well as post-disaster management.

II. HAZARD IDENTIFICATION AND RISK ASSESSMENT

Hazards are the sources or situations which have the potential to cause undesired events. Risks are the combination of likelihood which creates a chance for the undesired events. All industries and workplace consist of Hazards and Risks which creates and cause the chances of accidents. In order to reduce those hazards and risks, the hazard identification and risk assessment have to be performed periodically. Hazard Identification and Risk Assessment is a tool used by industries to identify the hazards and providing control measures as per the risk priorities of each hazard. After the hazards are identified the risks can be assessed by quantitative and qualitative method to determine whether the identified risks are significant or non- significant.

HIRA is a combination of deterministic, probabilistic, and quantitative method. The deterministic methods take into consideration of the products, the equipment and quantification of the various targets such as people, environment, and equipment. The probabilistic methods are based on the probability or requency of hazardous situation apparitions or on the occurrence of potential accidents. The uantitative methods analyse various data numerically. The steps involved in HIRA are

1) Classify Work Activities
2) Hazard Identification
3) Risk Assessment
4) Monitor and Review

III. PROCESS DESCRIPTION

Its yarn storage area,
Front pass of Yarn loading point ,
The different yarn is segregation,
The yarn box move to fabric knitting room by the help of vehicle.

A. *Fabric Knitting Machine*

Knitting machine process
Knitting is a process of using long needles to interlink or knot a series of loops made by one continuous thread. Each loop or knot connects to another one, and when enough loops have been made, the result is a flat piece of material called a textile
Type of knitting machine

1) *Circular Knitting Machine:* In this machine the needles are implanted on a circular cylinder, which when used creates a seamless tube of fabric, by joining the stiches from the needles.
2) *Single Jersey Machine:* As opposed to double jersey machine, the Single jersey machine has only one cylinder one which one set of needles and sinkers are placed on. The diameter of this cylinder is generally around 30 inch, which can vary according to the machines type and requirement. The fabric manufactured on a Single jersey machine is known as “Single jersey fabric”, they have a plain thickness, almost half if compared to the Double jersey fabric. Both front and back side of this fabric is visibly different
3) *Double Jersey Machine:* Double jersey machines have two sets of needles; one on dial and as well as on cylinder. There are no sinkers in double jersey machines. known as double jersey fabric
4) *Interlock Double Jersey Machine:* In this type of double jersey machines, the needles on the cylinder and the dial are placed opposite and alternatively. Interlock machine uses two types of latch needles instead only one type which is used generally in circular knitting machines.
5) *Terry Single Jersey Machine:* Terry fabrics are manufactured on Terry circular knitting machine using “Plush knitting technique”. In this technique generally—the one set of sinker loops are made longer than the ground fabric sinker loops this longer set of sinker loops form the velvet like pile on the fabric, both the threads, of pile and ground fabric are worked together to give a stable structure.

B. *Dyeing Machine*

The machine which is used to dyeing or coloring of materials like yarn, fabric, garments or any other materials is called dyeing machine. Dyeing machines come in all shapes and sizes to accommodate the various forms and quantities of textile materials
TYPES OF DYEING MACHINE

1) *Soft Flow Dyeing Machine*

In the soft flow dyeing machine water is used for keeping the fabric in circulation. The conception difference of this equipment from a conventional jets that operates with a hydraulic system is that the fabric rope is kept circulating during the whole processing cycle (right from loading to unloading).There is no stopping of liquor or fabric circulation for usual drain and fill steps. The principle working behind the technique is very unique.
There is a system for fresh water to enter the vessel via a heat exchanger to a special interchange zone. At the same time the contaminated liquor is allowed channel out through a drain without any sort of contact with the fabric or for that matter the new bath in the machine.

2) Jet Dyeing Machine

Jet dyeing machine is the most modern machine used for the dyeing of polyester fabric with disperse dyes. In these machines, both the fabric and the dye liquor are in motion, thereby facilitating a faster and more uniform dyeing. In jet dyeing machine, there is no fabric drive reel to move the fabric. The fabric movement by only force of water. It is economical, because of low liquor ratio. It is users friendly because comparison with long tube dyeing machine, to control the fabric movement four valves required. In jet dyeing machines and fabric dyeing machine, there is only one valve. Absent of reel, reduce connecting electric power, maintenance of two mechanical seal and breakdown time, if jet pressure and reel speed not synchronized.

In jet dyeing machines a strong jet of dye liquor is pumped out from an annular ring through which a rope of fabric passes in a tube called a venturi. This venturi tube has a constriction, so the force of the dye liquor passing through it pulls the fabric with it from the front to the back of the machine.

Thereafter the fabric rope moves slowly in folds round the machine and then passes through the jet again, a cycle similar to that of a winch dyeing machine. The jet has a dual purpose in that it provides both a gentle transport system for a fabric and also to fully immerse the fabric in liquor as it passes through it.

In all types of jet machines there are two principle phases of operation:

1) The active phase in which the fabric moves at speed, passing through the jet and picking up fresh dye liquor
2) The passive phase in which the fabric moves slowly around the system back to the feed-in to the jets

Jet dyeing machines are unique because both the dye and the fabric are in motion, whereas in other types of machine either the fabric moves in stationary dye liquor, or fabric is stationary and the dye liquor moves through it.

The design of the jet dyeing machine with its venturi means that very effective agitation between the fabric rope and the dye liquor is maintained, giving a fast rate of dyeing and good levelness. Although this design can create creases longitudinally in the fabric, the high degree of turbulence causes the fabric to balloon out and the creases disappear after the fabric leaves the jet. However, the rapid flow of the dye liquor can lead to a high degree of foaming when the machines are not fully flooded. The machines operate at low liquor ratios of about 10 : 1, so as with beam dyeing, exhaustion is good and water and energy consumption efficient.

C. Stenter Machine

Stenter machine is not only a dryer but also used for many other purposes. Here knitted and woven fabric in open width form is treated. This multipurpose machine is used for the following purposes:

1) Drying
2) Heat setting
3) Width control
4) Curing
5) Finishing chemical application
6) Selvedge printing
7) Uniform moisture control for pad batch dyeing
8) Loop control
9) Weft straitening
10) Pigment dye application
11) Any thermo fixation
12) Padding mangle

Here finishing like OBA treatment, dry-cross finish, moist cross finish, wrinkle free finish, easy care finish can be done along with width and shrinkage control.

WORKING PROCEDURE

Continuous drying is done in a stenter frame by convection. Blowers impinge hot air on both the top and bottom of fabric as the fabric passes through the chamber of the machine. Its frames are equipped with an endless chain on each side to grip the fabric by both selvages as it enters chamber.

The distance between the chains can be increased or decreased. In every chamber there are burners and blowers. The temperature of each chamber can be controlled individually. The fabric gripping in stenter, two systems are available:

a) Clip to grip coarse fabrics like twill fabric.
b) Pin to grip fine fabric.

D. Mechanical Finishing

A simple device which simulates the effects of calendaring is the domestic iron. Hot ironing makes garment smooth flat by removing its crinkles and creases. Besides making the fabrics free from creases by calendaring,

1) it is possible to raise the luster of the fabric,
2) make it compact by closing the threads,
3) impart a soft feel and 'thready' or
4) linen like appearance to it

It reduces the yarn slippage as well as thickness of the fabric by varying the calendaring operation.

The need of calendaring arises mainly because the fabric when it is wet processed and dried, is in the least lustrous state and its surface is not smooth because of presence of highly crimped and wavy threads. To meet this need the fabric is passed between the rollers or bawls of a machine termed 'Calender' and this mechanical process

a) Raising

Raising is a process of lifting of a layer of fibres from the surface of the fabric so as to form a hairy surface or pile. The process imparts a warm and soft handle to both on the woven and knitted fabrics; in fact, the formation of a pile on the fabric can make it exceptionally soft. The pile also includes a large amount of air and since air is a bad conductor of the heat, the raised fabrics feel vary warm as well assoft. In the early days, only cotton and woolen fabrics were raised, but now besides these fabrics, man-made fibre fabrics also raised. If the fabric contains a woven or coloured pattern, the weave and pattern get subdued on raising and various colour blends.It is easier to raise the fabric in the wet state than in dry state. Therefore, moist raising is most widely adopted.

b) Shearing

Shearing means removing or taking off fibre ends by cutting. It is carried out to cut fibres of random length to produce a level pile and prevent pilling in case of synthetic fibres by resulting of the height of the fibres particularly to produce clean staple fibre fabrics. Napped fabrics are mostly sheared.

Knitted fabrics are sheared on a machine having a single cutting head per unit where in case of woven fabrics multiple sheared are used. The pile heights are regulated by adjusting the distance between the cloth rest and rotary blade.

c) Sanforising

A method of producing unshrinkable cotton fabric is to give it a thorough wash in a washing machine so as to allow it to shrink freely and then dry and finish it without stretching. This method however is not reliable and not suitable for commercial production.

d) Napping

In napping the surface of the cloth is raised, cut even and smoothed by a napping machine known as planetary napper.

e) Sueding

When a vary mild effect of raising is required a special type of machine called sueding machine is used. This consists of a vertical set of small diameter rotating rollers covered with an abrasive surface such as sand paper or emery cloth. There is a rubber covered pressure roll which presses the fabric against the abrasive covered cylinder. The abrasion of the fabric surface takes place when the fabric is open width presses between the pressure roller and abrasive covered cylinder. A vary sort pile thus raised according to the pressure of the fabric against these rollers which rotate in a direction of opposite to that of the fabric.

f) Setting and Heat-setting

During manufacturing processes like spinning, weaving or knitting, the fabric is subjected to stresses and strains and release of these distortions in fabric leads to distortions in fabric structure and woven design and also uneven shrinkage. The purpose of the setting is to stabilize the woven structure of the fabric in a regular and permanent manner by relaxing the stresses. The effect is bought about by agencies like heat, moisture, and pressure and generally no chemicals are used in the process.

- *Yarn Godown*

The proposed action for the Hazards in Yarn godown is to electrical hazards in textile operation maybe related to electrical vehicle charging materials. Accident related to improper handling electrical vehicle charging ,

Injuries from charging activities, maybe due to adapter problem or connecting terminal damage . To avoid those electrical rubber mat ,to avoid unauthorized persons are handling charging station, charging station handling should remain within restricted zone under supervision, with particular attention paid to proximity of electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways.

Conduct regular inspection and repair of machine tools, in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as Helmets, Insulating gloves, safety shoes. Respiratory Hazards: Dust generated in textile includes corttonbox dusts, which are present in yarn godown,

The improper of cleaning process Incase of fire incident to indicate the fire alarm switch and automatically sense the smoke detector and additionally provide fire extinguisher.

- *Fabric Knitting*

The proposed action for the hazard in Fabric knitting is to electrical hazard and trolley movement, cleaning process in this operation maybe related to fabric machine. This machine due to create noise level .Its rotating parts maybe Entanglement of workers clothes and hairs due to rotating part, Finger or hand struck by in rotating parts.

The fabric due to shifting in fabric storage area by the help of trolley, Injury from the needle point changing and hot oil replacement shifting of materials maybe due to handling activity .to avoid those handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity of electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of machine tools, in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as ear plug, apron ,head cap .Respiratory Hazards: Dust generated in Fabric knitting machine includes yarn dusts, which are present in fabric knitting area.

- *Dyeing*

The proposed action for the Hazards in dyes kitchen shop is to implement First and foremost, using a less toxic or environment friendly abrasive media will give less dominant after effects on the atmosphere. Water based blasting media may be preferred due to its dust reduction property.

The proposed action for the hazard in dyeing is to chemical handling ,confined space , electrical hazard and trolley movement, cleaning process in this operation maybe related to fabric machine. This machine due to create health .Its rotating parts maybe Entanglement of workers clothes and hairs due to rotating part, Finger or hand struck by in rotating parts. The fabric due to shifting in fabric storage area by the help of trolley,

Injury from the door handling ,maintain proper temperature and steam line handling and rejection water go to the etp collection tank maybe due to handling activity .to avoid those handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity chemical explosion ,and the electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of machine tools safety valve ,drain valve ,temperature maintain properly in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as PPE (The nitrigul glove and respiratory mask, gum boot, pvc apron) .Respiratory Hazards: Dust generated in chemical handling includes dyes formation of dusts, which are present in dyeing machine area.

- *Stenter Machine*

The proposed action for the hazard in stenter is to chemical handling and rotating parts, electrical hazard and trolley movement, hot surface machine, cleaning process in this operation maybe related to stenter machine. This machine due to create health .Its rotating parts maybe Entanglement of workers clothes and hairs due to rotating part, Finger or hand struck by in rotating parts .The fabric due to shifting in fabric storage area by the help of trolley,

Injury from the door handling ,maintain proper temperature and steam line handling and rejection water go to the etp collection tank maybe due to handling activity .to avoid those handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity chemical explosion ,and the electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of machine tools safety valve ,drain valve ,temperature maintain properly in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as PPE (The nitrigul glove and respiratory mask, gum boot, pvc apron) .Respiratory Hazards: Dust generated in chemical handling includes dyes formation of dusts, which are present in stenter machine area.

- *Mechanical Finishing*

The proposed action for the hazard in mechanical finishing is to drum rotating parts and knife or plate ,electrical hazard and trolley movement, hot surface machine ,cleaning process in this operation maybe related to mechanical finishing machine. This machine due to create health .Its rotating parts maybe Entanglement of workers clothes and hairs due to rotating part, Finger or hand struck by in rotating parts .The fabric due to shifting in fabric storage area by the help of trolley,

Injury from the drum rotating parts, knife handling and steam line handling , maybe due to handling activity .to avoid those handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of machine tools in properly in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as PPE (The pvc apron, dust mask, ear plug) .Respiratory Hazards: Dust generated in machines includes dusts, which are present in mechanical finishing machine area.

		R		Machine not proper cleaning	can leads to fire	Fire hazard		A		IPC			√		√	4	1	4	16	High Risk	1)Given cleaning awareness and training to employees , 2)Provide fire equipment such as somke detector, fire extinguisher.						

Ware House

The proposed action for the hazard electrical hazard and physical hazard , fork lift and trolley movement ,cleaning process in this operation maybe related to ware house. The fork lift due to create health hazard .Its rotating 360* stacker and fork lift any materials or human or rack parts maybe kit the person or fatal accident create the fork lift, so will be followed in ware house safety procedure, pins are insert and remove by the help of stacker machine ,the stacker machine charging place separate place

Injury from the fork lift driver or other person and fork lift handling of maybe due to handling activity .to avoid those all process fully knowledge and trained person and handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity electrical cables and equipment's. Locate rack tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of fork lift machine tools in properly in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as PPE (The safety jacket or safety apron, safety helmet, safety goggle, safety shoe) .Respiratory Hazards: Dust generated in fabric and atmospare air includes fork lift movements, which are present ware house area.

- *Boiler*

The proposed action for the Hazards in boiler and thermo back is to implement Position yourself so that you are not hit by objects moving down the conveyor. Ensure that you can see the conveyor system when you are at the operating controls. Ensure that guards are in place for all moving parts of the drive system and in all zones where hazards such as in-running friction burns or boiler ire process entry are present (includes above, sides, and below the conveyor). Guard all pinch points between the conveyor system and fixed objects. Locate guardrails around low level conveyors and areas where conveyors pass through the floor/ceiling. Locate emergency stop cut-off switches near the operator and along the length of the conveyor at approximately 30 metres (100 feet) apart (or closer). Ground belts on belt conveyors to prevent static build-up.

The proposed action for the Hazards in wood and coal storage is to implement by conducting pressure test for the steam and oil pipeline and automated and manual valves are strategically placed along the pipeline route to enable the pipeline to shut down immediately and sections can be isolated quickly as and when required.

The proposed action for the hazard in boiler and thermo back machine is to hot surface area, wood and coal handling, hot oil chamber, steam line ,electrical hazard and trolley movement ,cleaning process in this operation maybe related to boiler and thermo back machine. This machine due to create health .Its rotating parts maybe Entanglement of workers clothes and hairs due to rotating part, Finger or hand struck by in rotating parts .The wood due to shifting in fabric storage area by the help of trolley,

Injury from the steam line and oil pipe line, maybe due to handling activity .to avoid those insulate and cover the steam and oil pipe line handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of machine tools in properly in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as PPE (The heat resistive glove and leather apron, goggle and safety shoe ,safety helmet, dust mask) .Respiratory Hazards: Dust generated in boiler machines includes dusts, which are present boiler and thermo back machine area.

9	Evaporator	R		4th to water injection water convert to the steme process in evaporator	1) Can cause respiratory problem 2)Earth contamination	Health hazard / Environmental hazard		A		LC			√	√	√	4	2	1	8	Low Risk								
		R		Hot surfaces of the machine	1)Can cause increase the body temperature, 2) Can cause Respiratory problem	Health hazard		A		IPC			√	√	√	3	2	1	6	Low Risk								
		R		Leakage of steam	Can cause burn injury	Health hazard			E	IPC			√	√	√	3	2	1	6	Low Risk								
10	Technician operation	R		1)Maintance for pipe line & hot pipe line, 2)Hot work (welding process) 3)Valve changes , 4)Motor drive problem, 5)Rotating part problem 6)Heavy tools handling 7)Work place at height 8)Tank damage	Fatal or injury may occur when fall from height.	Health hazard			E	HC			√	√	√	5	2	2	20	High Risk	1) Provide proper working platform to do the work. 2) Awareness was given to workers to wear safety belt and helmet when work above 2 meter height and below the tank							

ETP and RO Plant

The proposed action for the hazard sludge waste collection ,chemical handling, collection of waste water tank, processing tank ,electrical hazard and trolley movement ,cleaning process in this operation maybe related to Etp and Ro plant. This ETP waste due to create health hazard .Its rotating drum parts maybe in clothes and hairs Finger or hand struck by in rotating parts .The sludge waste proper segregation and sludge waste are compressed machine. this machine will be great the air this air affect the human and air pollution.

Injury from the waste water and waste disposal handling of maybe due to handling activity .to avoid those all process fully knowledge and trained person and handling procedure given to the employees some materials handling only authorized person only should remain within restricted zone under supervision, with particular attention paid to proximity electrical cables and equipment's. Locate machine tools at a safe distance from other work areas and from walkways. Conduct regular inspection and repair of machine tools in properly in particular protective shield and safety devices/ equipment's. Use appropriate PPE (Personal Protective Equipment's) such as PPE (The pvc apron, glove, safety helmet, gum boot, goggle) .Respiratory Hazards: Dust generated in ETP plant includes sludge waste, which are present ETP and RO plant machine area.

			NR	Loose connection of Switching operation	Can cause of injury of human and pain.	Health hazard			E	BC			√			4	2	1	8	Low Risk							
2	Panel board operation	R		1)Indication lamp not function, 2)Handle working condition 3)Meter not function, 4)Problem of earth leakage 5)Relay function	May cause of fatal accident And property damage	Health hazard and fire hazard			E	BC			√	√	√	5	2	2	20	High Risk	1)Awarness to be given proper handling ,use ppe's and stand on rubber mat 2)Use proper insulated wiring with earthing and install proper circuit bracker 3)Authorized person only operate the panel						
3	UBS battery	R		1)Terminal short circuit, 2)Low level of water 3)Teminal corrosion 4)Battery terminal improper connection and explosion of battery	May cause of fatal accident And property damage	Health hazard and Fire hazard			E	BC			√	√	√	5	3	1	15	High Risk	1) Awarness to be given proper handling of battery and authorised person only maintain , 2)Regular check list follow up						
4	Transformer	R		1)Magnetic flux 2)Increase in temperature 3)Not working Meter, 4)Not working tripping circuit, 5)Not maintain oil level, 6)Service of transformer or maintace work ,failure of transformer.	1)can affect electronic material 2)chances of blasting 3)live lines can harm ful 4)Proper earthing for transformer discharging	Health hazard and Fire Hazard			E	LC			√	√	√	5	2	2	20	High Risk	1)Awareness to avoid electronic material 2)Required to maintain the level of the cooling oil 3)Provide barricade for transformer area,danger sign board display 4)Awareness to be given for proper handling ,use ppe's and to use rubber mat						
5	Genset	R		1)High noise 2)Vibration 3)Smoke 4)Spillage of diesal 5)Check the diesal tank leakage 5)Maintain ratiator water level 6)Service of generator or maintace work ,failure of Generator.	1)can cause of earing loss 2)can cause numdness 3)can cause respiratory problem 4)may cause fire accident and property damage or fatal accident 5)Power supply off and not in auto mode,	Health hazard,Fire Hazard and Environmental Hazard			E	LC			√	√	√	5	3	1	15	High Risk	1)Provide aquastic and ear muff if the noise level goes beyond 80 db 2)Install genset with proper bed to avoid vibration ,preventive maintenance chart is required 3)Awareness to wear proper respiratory and check emission to minimize harmful particles 4)Awareness to handling diesal and follow the filling procedure, storage container should be in seprate place with secondary container,to avoid over flow provide level indicater on storage tank, 5) Awareness to be given for proper handling ,use ppe's and rubber mat if it is necessary						
6	Electrical waste	R		If it is not disposed properly it will cause contamination to the land	Earth contamination	Environmental Hazard		A		LC			√	√	√	4	2	1	8	Medium Risk	Awareness has to be given to collect the waste properly and dispose it to the Authorized person						
7	Compressor	R		1)High noice 2)Vberation 3)Rotating part 4)Air receiver tank make high pressure 5)Drain valve 6)Safety valve	1)can cause of earing loss 2)can cause numbness 3)can harmful for human body 4)can create blasting accident	Health hazard			E	LC			√	√	√	5	4	1	20	High Risk	1)provide aquastic and ear muff give to electrican the noice above 80 db 2)compressor install with proper bed to avoid vibration ,preventive maintanaince chart is require 3)Proper pully guard to be provided 4)Properly maintain the safety valve and pressure on the tank 5) Awarness to be given proper handling ,use ppe's and stand on rubber mat 6) separated from the production area with required barrygation and danger symbols.						
8	lift operation	R		1)Damaged rope and excessive weight 2)electrical fire	1)can cause risk of falling injury 2)can cause property damage and human loss	Health hazard and Fire Hazard			E	BC			√	√	√	5	2		0	High Risk	1)Properly maintained and shall be thoroughly examined by competent person atleast once in every period of six months. allow only limited weight . lift should be in ground level at the time of maintenance.						
9	Drilling machine	R		1)Improper Handling of machine 2)Improper material Fixing 3)Damage or Broken condition (up and down) Handle 4)Broken condition of bottom plate 5)Improber connection of drill bit	1)can cause risk of falling injury 2)can cause property damage and human loss	Health hazard		A		IPC			√	√	√	5	4	1	20	Medium Risk	Awarness to be given proper drilling machine handling, and wear the PPE.						
10	Cutting machine	R		1)Improper Handling of machine 2)Improper material Fixing 3)Damage or Broken condition (up and down) Handle 4)Improber connection of Cutting tools	1)can cause risk of falling injury 2)Can cause injury of hand 3)Can cause of earing loss 4)Can cause property damage and human loss	Health hazard		A		IPC			√	√	√	5	4	1	20	Medium Risk	Awarness to be given proper cutting machine handling, and wear the PPE.						
11	Welding machine	R		1)Improper wire connection 2)Improper earth wire and rod connection 3)Damage the welding handle 4)Not use welding goggles 5)Damage the switching	1)Can cause of electric shock 2)Can cause of eye iritattion	Health hazard			E	IPC			√	√	√	5	3	1	15	Medium Risk	Authorized person only allowed, proper covered in welding area, Advised to use the confined space S.O.P properly and advised to use proper ppe's						
12	Formation of Electrical waste	R		1) Generation of E.waste 2) Generation of used battries 3)Usage of diesel	1) Can Cause polluting the Land	Environmental hazard		A		LC			√	√	√	5	3	1	15	Medium Risk	if it is not disposed /maintained properly it will cause contamination to the land. should be disposed off properly through authorized recycler						

Power house

Proper management of the risks associated with aboveground storage tanks is essential. Everyone who works on or around the equipment or the fuel storage locations should be trained to identify and eliminate risks. They should also know how to conduct routine inspections of fuel storage containers, dispense fuel and operate pump shutoffs properly.

The generator machine run at the generate the noise so wear the ear muff,generator is automatically run by the power cut time, generator handle good knowledge electrical person only allowed, the transformer is high voltage so any body circuit open or close wear the ppe and good handling electrical person only applicable. The transformer oil or other problem we are atten this person wear the ppe and proper earthing for transformer, panel board handling or breaker handling and really circuit person only knowledge electrical person only allowed, the E-waste are disposed in only authorized person , all the machine and panel board connect proper double earthing

- *Key Performance Indicator*

KPI table

S.NO	KPI	KPI Details	Requirements	Target
1	Legal documents	Fire safety license	Cross verification process by one year	100%
2	Test certificate (Boiler,Dying,,ETP,Forklift operator)	Medical checkup (Cancer & DNA test,Lung test,Eye test)	Cross verification process by 6month	100%
3	License Holder	Electrician, fork lift operator, bus drivers	Cross verification process by 6month	100%
4	Transportation vehicles	Ensure safety condition and fire extinguisher	All the workers using transportation vehicles	100%
5	New employees	Fire & Safety details and E&D point details,	As company requirments	100%
6	Employee special training	Fire Fighting trainer , First aid trainer ,	External program conducting by one year	100%
7	Fire safety trainer	10% to 15% of the total employee in the company should be in fire safety training	Internal program conducting by six month	100%
8	First aid trainer	2% to 5% of the total employee in the company should be in fire safety training	Internal program conducting by six month	100%
9	PPE training	PPES using methods	Internal training conducting by one month	100%
10	Chemical training	Chemical handling and Spill kid training	Internal training conducting by one month	100%
11	Health & safety committee meeting	AS concerned persons only	Internal committee meeting by two month	100%
12	Chemical details	List of chemical,All chemicals MSDS and SDS,chemical pictogram inculding transported sub 7chemical box,	Cross verification process by one month	100%
13	Drinking point	Is it 8compatible with t9he working place (falling hazard)	Cross verification process by one weekly	100%
14	Conduct a Risk assessment once in 6 months	New layout changes, Process changes	Maintain post risk score below 10 points	100%
15	Incident details	small injury - , major - , death - ,	Maintain the record in department and nurse	100%
16	Accident details	minor ,major, death.	Maintain the record in department and nurse	100%

17	Fire safety equipments	Fire pump room ,fire hydrant,fire extinguisher,Fire alarm switch.	Good working condition at any time	100%
18	PPES	Maintain minimum stock level of concerned department	Above 20-25% from the required stock	100%
18.1	PPES	Monitoring of PPEs condition	Cross verification process by one month	100%
19	Risky machine	Ensure the safe condition of risky machine (Equipments details :- Lift,fork lift , generator ,compresssor,dying machine ,stenter machine, chain pully, sensor , door safety limit switch,emergency switch)	Preventive Maintenance schedule & routine	100%

WALK ON FIELD OBSERVE						
Responsible person:		Inspection Date:		Next Due Date:		
SL.NO	DETAILS	CHECKING DETAILS	OK	NOT OK	NOT APPLICABLE	IF FOUND ANY DEVIATION (UPDATE IN DECATHLON FORMAT)
1	First aid box	Clearly visible				
		Easily accessible				
		Medicine available				
2	Fire extinguisher	Clearly visible				
		Easily accessible				
		Available operating instruction				
3	Fire alarm switch	Clearly visible				
		Easily accessible				
		Available operating instruction				
4	Smoke sensor	Clearly visible				
		Check the function				
5	First aid and Fire fighter list	Available of trainer person list				
		Check the training skill				
6	PPE Box	Clearly visible				
		Easily accessible				
		PPE available				
		Condition of PPE				
7	Drinking point	Stand condition				
		Spillage of water				
		Condition of water				
		Condition of Water can				
8	Exit and emergency exit door	Sign board clearly Visible				
		No blockage of exit and emg exit door				
9	Emergency exit light	Sign is clearly visible				
		Two light available				
10	Passage way	Clearly visible				
		Easy to evacuate				
		No block any objects				
11	Evacuation plan	Clearly visible				
		Mention machine and fire equipment's details				
		Check if any update				
12	Evacuation Details	Available of Emergency evacuation procedure				
		Available of Emergency response team chart				
13	Evacuation	Clearly visible				

	routs Board	Check the route direction				
		Check the board Damages				
14	Assembly point	Worker knowledge of Assembly point				
		Assembly point location and number				
15	PPE	PPE instruction Board				
		Consult dpt wear the PPE's				
		Identify the damage				
16	Sharp tool	Tied the sharp tools,				
	(Trimmer or scissor)	Check the condition Trimmer or scissor ,				
		Verify the accountability check list				
17	Emergency Switch	Check the condition of Emergency switch				
		Worker knowledge of emergency switch				
		Operator which condition Operate emergency switch				
18	Needle guard	Condition of Needle guard and eye guards				
		Identify the damage				
		Worker use the Needle & eye guard				
19	Pulley Guard	Condition of pulley guard				
		Identify the damage				
		Maintain cleaning of motor				
20	Motor coupling guard	Condition of guard				
		Identify the damage				
21	SSB panel board	No damage Switches				
		No dust				
		Cleaning of panel board condition				
		Indication lamp condition				
		Warning sign				
22	LDB Panel board	No damage Switches				
		No dust				
		Cleaning of panel board condition				
		Any Dummy apply the gap				
		Warning sign				
23	Machine Panel board	No damage Switches and indicating lamp, display				
		No dust				
		Cleaned condition of panel board				
24	Rubber mat	Available of electrical rubber mat				

		Identify the damage				
25	Wiring	Identify the damage wire				
		Loose wire				
		Identify Removing wire				
		Proper insulation				
26	Machine	Function of Door sensor				
		Function of Temperature sensor				
		Unwanted sound and vibration				
		Check the safety valve and pressure valve				
		Function of drain valve				
27	Combustible storage area	Danger symbol mention				
		MSDS Detail				
		Handling time wear the PPES				
		Use proper secondary container				
28	Trolley and hydraulic trolley	Trolley only placed on inside the yellow marking				
		Free of passage				
29	Forklift and Stacker machine	Only Authorized person operate				
		Check the driving licence				
		Check the battery condition				
		Check the oil & Diesel or water leakage				
30	Chemical storage area	Check the compatibility chart				
		Warning Sign Display				
		Wear the PPE				
		All the Chemical & dyes use GHS symbols				
		Spill kid use instruction				
		MSDS Detail in all the chemical and dyes				
		Use proper secondary Secondary container				
		Identify any combustible material				
31	Chemical and dyes using area	All the Chemical & dyes use GHS symbols,				
		Wear the proper PPE				
		Identify any combustible material				
32	Eye wash station and eye wash bottle	Clearly visible				
		Easily accessible				
		Available operating instruction				
33	Storage area Stacking method	Check the warning sign				
		Proper stacking materials				
		Material stacking only inside of yellow marking				
		Free of passage

Menaka Mills Pvt Ltd						
WALK ON FIELD OBSERVE						
Responsible person:		Inspection Date:		Next Due Date:		
SL.NO	DETAILS	CHECKING DETAILS	OK	NOT OK	NOT APPLICABLE	IF FOUND ANY DEVIATION (UPDATE IN DECATHLON FORMAT)
LEGAL AUTHORIZATION AND PERIDICAL CHECK						
1	Electrical installation	Loose wire,				
		Burning wire,				
		Multi looping,				
		Damage wire,				
		Improper jointing wire,				
		Identify Melting & over heating.				
2	Elecal warning Sign	Danger Symbol,				
		HV / LT mention.				
3	Electrical rubber mat	Available of electrical rubber mat,				
		Identify the rubber mat damage,				
4	Legal doc	Available of Boiler test certificate				
		Available of compressor and presser vessel tank test certificate,				
		Available of Generator (emission) test Certificate,				
		Available noise and lux test certificate,				
5	Boiler Safety	Check the Safety valve,				
		Check the Pressure release valve,				
		Check the working condition of pressure gauge,				
		Check the Botton valve.				
		Check cut off / on,				
		Boiler max pr 7.5KG,				
6	Dyeing Safety	Check the Safety valve,				
		Check the Pressure release valve,				
		Check the pressure gauge,				
		Check the drain valve auto function.				
		Check the temperature sensor,				
7	Valid persion only	Check the Electrician license,				
		Check the fork lift operator license,				
		Check the Boiler operator certificate,				
8	Machine service	Work permit follow,				
		LOTO follow,				
		Wear proper PPE,				
		Apply Warning sign board,				
		Check the Preventive maintaince details.				
		Accident and incident report,				

9	Work place safety	Near miss report,				
10	Installation	New electrical installation,				
		New machine Installation,				
		New building construction,				
RISK & SAFETY MANAGEMENT						
11	Pregnant worker(PW) & Breast feeding worker(BFW)	Identify the Pregnant worker and breast feeding worker,				
		Availability of caretaker,				
		No allowed heavy load work and don't entry hazards area ,				
		No allowed in over time,				
		No allowed night shift,				
		Proper break time and extant the break time,				
		Regular update of PW & BFW,				
		Allowed in medical leave (Emergency time),				
		Ensure work place risk in PW & BFW.				
12	Risk Assessment	Available of Risk assessment,				
		Ensure all the department Risk Assessment (Updating If Layout changes or New machine installation),				
		Ensure environmental hazard and ergonomic hazard, fire hazard.				
13	PPE'S (e.g. engineering controls, reduce exposure time, insulation wall)	Sufficient level of PPE stock,				
		Free cost of replace the PPE's,				
		Check the PPE condition,				
		Check the PPE box condition,				
		Find the improper PPE wearing person,				
		To reduce exposure to noise use to proper PPE's				
		Identify the Dpt wise PPE's warning sign board fixed,				
14	First aid box	Ensure all the production building fix the first aid box,				
		Clearly visible FAB,				
		Easily accessible FAB,				
		Medicine available FAB,				
		No blockage of FAB,				
15	Electrical Risk	Work permit s/m followed,				
		LOTO procedure followed,				
		Wear the proper PPE,				
		Use the warning sign board,				
		Identify the Loose wire, Burning wire, Multi looping, Damage wire, Improper jointing wire, Identify Melting & over heating.				
		Available of electrical rubber mat, Identify the rubber mat damage.				
		All the SSB,DP,LDP proper wire insulate				

		and proper dummy provide, cable are covered by pvc pipe or other relevant materials.				
		Check the earth value monthly once,				
		Check the preventive maintaince schedule,				
		Accident report (major, minor, medium).				
		Near miss report.				
		Work permit report.				
		Noise report.				
16	Record	H&S committee meeting report,				

CHEMICAL MANAGEMENT SYSTEM						
		List of Chemical,				
		List of MSDS,				
		Sufficient level of secondary container,				
		Sufficient level of FE,				
		Availability of FAB and medicine,				
		Availability of spill kit,				
		Available of emergency evacuation procedure,				
		Available of emergency chart,				
		Available of evacuation map,				
		Available of FF & FA trainer,				
		Availability of eye wash station,				
		Availability of humidity meter,				
17	Chemical Storage area	Available of warning sign board,				
		Available of PPE sign board,				
		Check the condition of secondary container,				
		Identify the damage and spillage ,				
18	Secondary container	Regular inspection of secondary container.				
		Clearly visible of spill kit,				
		Easily accessible,				
		Available of spill kit materials,				
19	Spill kit	Available of Spill kit operating instruction,				
		MSDS & SDS there are should be following details are verified :				
		Product Name,				
		Manufacturing Address,				
		Effect the chemical,				
		Human Health affect,				
		Pictogram symbols,				
		Suggestion PPES,				
		MSDS & SDS full update version,				
20	MSDS and SDS	Version 3 years once reverse the MSDS,				
		The employees should be knowledge of the MSDS information.				
		PPE using awareness,				

21	Awareness	Spill kit Awareness,				
		Eye wash and shower station Awareness,				
		General health and safety Awareness,				
		Fire drill awareness,				
		Fire fighting training,				
		First Aid training,				
22	Eye wash and shower station	Available of operating instruction,				
		Easy Access able,				
		Check the valve,				
		Sufficient level of water and water pressure,				
23	PPE & PPE box	Check the condition of PPE box,				
		Check the condition of PPE,				
		Find the improper PPE wearing person,				
		Availability of PPE,				
24	Empty can and box	Proper segregation of waste can & carton box storage area,				
		Chemical can after clean then can move to empty can storage area,				

FIRE SAFETY EVACUTION						
25	Building	Clear visible of exit and Emg exit door,				
		Clear visible of exit and emg exit board,				
		Clear visible of Yellow line and red arrow making,				
		Clear visible of evacuation map,				
		Clear visible of Fire safety equipment,				
		Clear visible of first aid box,				
		Applicable centralized fire alarm system,				
26	Stair case	No Object storage(Waste materials, chemical, carton box)				
		Steps start and end zebra marking,				
		Availability of Hand dill,				
27	Exit and Emg exit	No close the exit and emg exit door (including break and lunch time period, same as night duty lunch time),				
		No blockage of exit and emg exit rounds (free from obstacles),				
		No automatic door,				
		No flammable material stored in rounds and door,				
		Clear visible of Exit and emg exit Sign board,				
		Emg exit width 80 cm ,				
28	Emergency light	Clear visible of exit light sign,				
		Check the Doom light direction,				
		Check frequently Battery back up (Update check list),				
29	Yellow and red marking	Clear visible of yellow line mark and red arrow marking,				
		Identify any defect of marking,				
		Centralized fire alarm s/m,				
		All the building Sufficient level of fire alarm s/m,				

		All the worker Identify the FA,				
		Clear visible of Fire alarm s/m,				
		Available of operating instruction,				
		Available of hammer,				
		Free from obstacle,				
		Evacuation of worker Minimum 5 mit of working ,				
30	Fire alarm system	Available of UBS battery backup,				
		All the building Sufficient level of sound,				
		Its different Sound easy identify the worker.				
		Evacuation of worker Minimum 5 mit of working,				
31	Fire alarm Sound	Employee how to operate FA.				
		Update check list,				
32	Fire alarm Test	All time working condition with maintaince and service of FA,				
		The building Sufficient level of fire extinguisher,				
		Clear visible of fire extinguisher,				
		Easy accessible of fire extinguisher,				
33	Fire equipment	Available of operating instruction board,				
		Yearly once Refilling FE,				
		Monthly once checking of FE,				
		Update the FE card,				
		Update the check list,				
34	Fire extinguisher	Employee how to operate FE,				
		Building Sufficient level of smoke detector,				
		different Sound easy identify the worker,				
35	Smoke detector	**Frequently check the battery.**				
36	Smoke detector test	Update check list				
		First aid trainer - 2% of worker,				
		Fire fighting trainer - 10% of worker,				
		Available FA & FE certificate,				
37	Trained person	The building FE & FA mention				
		Drill Awareness of worker,				
		Drill conducted by two month once				
		(Crosse verification of record),				
38	Evacuation Drill	This drill applicable for Buyer and visitor and other worker				
		(Factory inside of all the people applicable).				
		Everyone knows with our Assembly point num,				
		Line followed by the Assembly point				
39	Assembly point	Head counting Authorised person only,				
LIVING ENVIRONMENT						
		Availability of transport vehicle,				
		Driver only applicable for valid license holder,				
		Available of medical certificate in driver,				
		Check the vehicle live (FC),				
		Check the Preventive maintaince details,				

		Available of first aid box and Medicine,				
		Available of fire extinguisher,				
		Check the break condition,				
40	Transport	Check the light condition,				
		Check the neatness of rest room,				
		Availability of cleaning materials,				
		Available of continuous water				
		Per day 3 time of cleaning,				
		Cleaning time wear the PPES,				
		Clear visible of MSDS,				
41	Toilet	Available of restroom check list,				
		Clear visible of sign board,				
		Availability of drinking water,				
		Check the Stand condition				
		No Spillage of water				
		Check the Condition of water				
42	Drinking point	Check the Condition of Water can,				
		Work place H&S environment,				
		Proper ventilation,				
		Proper illumination,				
		Acceptable temperature,				
		Free access the toilet,				
		Free access the drinking point,				
		Free of use transport,				
		Proper wear the PPE'S				
43	Employee work place	Proper cleaning maintain,				
		Available of Employee medical certificate,				
		Available drinking point,				
		Available hand washing place,				
		Available of first aid box and Medicine,				

44	Canteen	Available of fire extinguisher,				
		Available of fire alarm switch,				
		Available of ERT chart and emergency procedure,				
		Available of Evacuation map,				
		Sufficient shitting table,				
		Only allowed in Responsible person,				
		Available of toys,				
		No allowed in sharp toys,				
		Available of drinking water,				
		Available of toilet,				
45	Crèche room	Ensure the inside no chemical.				
		Treatment only Responsible person (Doctor and Nurse),				
		Available of Doctor and Nurse,				
		Available of bed,				
		Available of Medicine,				

46	First aid room	Proper waste disposal and record,				
		Available of drinking water,				
		Available of toilet,				
		Identify the hygienic cleaning,				
47	Cleaning	All ways maintain Factory neat and clean,				
		Availability of dustbins,				
		Regular cleaning of dustbins,				
		Keep always dry condition of floor,				
48	Waste storage area	proper segregation of waste storage area				
		(E waste, Oil waste, machine waste, chemical waste, fabric waste),				
		Identify factory Inside the if any unnecessary place storage of waste,				
		Check the Waste disposal record,				
		Identify the GCT approval person is Waste collected

WORK PERMIT DESCRIPTION						
1)Date:		Time start:		Time end:		
2)Job Location:						
3)Job Description:						
4)Associated work permit (if any):						
Type	Permit No	Type	Permit No	Type	Permit No	

HAZARDS AND PRECAUTION			
Hazards	PPE	Electrical Isolation	Authorised ELE Incharge
Falling Objects Fall from height Overhead Danger Moving machine Auto start equipment Traffic movement HV / LV / Line near by Other	Safety helmet Safety shoe Safety Harness Gloves Life line Face sheld Other	LOTO Done Isolator put off & Locked Test for non operative	
		Service Isolation	Authorised MNT Incharge
		Depressurised Valve closed & Tagged Line blanked	
	OTHER PRECAUTIONS	Process Isolation	Authorised opeator
	Safety Net Scaffolding Crawl Board Signage Barrication	Valve closed & Tagged Line blanked Line disconnected	

PERMIT ISSUE AND ACCEPTANCE
Permit Requestor I understand the work scope,Hazards,Precautions to be tacken and ensure compliance. I will conduct a safety talk in this regard to the personnel and record on the back side of this permit. Name Sign Date & Time

Permit Authoriser I have reviewed the work scope,Hazards and pecautions and authorise for proceeding the work Name Sign Date & Time						
ENDORSEMENTS FOR EXTENSION / CANCELLATIONS						
Date	Time (AM / PM)	Valid upto	Requestor	Authoriser	After hour Authoriser	Operator
PERMIT CLOSURE						
Permit Requestor						
The job described in this permit has been completed ,all safety devices put back,area cleared and person on the job. withdrawn Name Sign Date & Time						
Permit Authorisr						
I have reviewed the work site,satisfied and accept for closing this permit Name Sign Date & Time						

SAFETY TALK

i have beeen explained on the content of this work permit (work scope, hazard precautions) and provided necessary ppe's .i shall strictly follow and will be held responsible or any deviations.

Table – 36.1 safety talk worker details

Sl.no	Name	Signature

IV. CONCLUSION

Hazard Identification and Risk Assessment (HIRA) study were made on the textile and various hazards of different process and their associated equipment's were found. Recommendations are provided to reduce high level risk to low level. . Noise level is measured in various areas of the industry and suitable control measures are suggested. In textile industries, the working environment is high in temperature and hence heat stress, chemical handling index is calculated for the workers working in the Boiler and Dyeing area, ETP & RO plant suitable preventive measures are given. Health hazards associated with each process are found and suitable mitigation measures are given for safe handling of the chemicals.

The KPI (KEY PERFORMANCE INDICATPOR) ,its new implementation of MENAKA MILLS UNIT-1 PVT LTD .the factory new update version of KPI table format and KPI schedule, sop o safety and health, list of deviation and monitoring inspection log ,list o PPE's tabulated department wise , transport safety, key person, daily and monthly on field observe ,work permit system.

The KPI and HIRA assessment details and schedule should be correctly followed and give to working awareness then successive run by factory.
