### Homomorphism of Characteristic Fuzzy Subgroup and Abelian Fuzzy Subgroup

Amit Kumar Arya<sup>1</sup>, Dr. M. Z. Alam<sup>2</sup>

<sup>1</sup>Research Scholar, P.G. Department of Mathematics, M. U. Bodh Gaya, Bihar

<sup>2</sup>Associted Proofeser, P.G. Department of Mathematics, College of Commerence, Arts & Science, Patna, Patliputra University, Patna – 20, India

Abstract: In this paper, we have established some independent proof of homomorphism on algebra of abelian and characteristic fuzzy subgroup. The characteristic of fuzzy subgroup [13] was first introduced by P. Bhattacharya and N. P. Mukharjee in 1986. Keywords: Fuzzy subgroup, characteristic fuzzy subgroup, abelian fuzzy subgroup and normal fuzzy subgroup.

### I. INTRODUCTION

The concept of fuzzy sets was introduced by L.A.Zadeh [15] in 1965. Study of algebraic structure was first introduced by A.Rosenfeld [1]. After that a series of researches have done in this direction P.Bhattacharya and N.P.Mukharjee [13] have defined fuzzy normal subgroup and characteristic fuzzy subgroup in 1986. In this paper we have tried to established some independent proof about the properties of fuzzy group homomorphism on algebra of characteristic fuzzy subgroup.

### II. PRELIMINARIES

In this section, we recall and study some concepts associated with fuzzy sets and fuzzy group, which we need in the subsequent sections.

### A. Fuzzy Set

Over the past three decades, a number of definitions of a fuzzy set and fuzzy group have appeared in the literature (cf., e.g., [15, 1, 3, 7, 10]). In [15], it has been shown that some of these are equivalent. We begin with the following basic concepts of fuzzy set, fuzzy point and fuzzy group.

**Definition 2.1** [15] A fuzzy subset of  $D_1$  be a function  $f_1: D_1 \to [0,1]$  the set of all fuzzy subset of  $D_1$  is sad to be fuzzy power set of  $D_1$  and designate by  $P_1(D_1)$ .

**Definition 2.2** [15] **Support of fuzzy set**. Suppose  $A_1 \in F_1$   $P_1(D_1)$  then the set  $\{A_1(d_1) : d_1 \in D_1\}$  is said to be the image of  $A_1$  is designate by  $A_1(D_1)$ . The set  $\{d_1 : d_1 \in D_1, A_1(d_1) > 0\}$  is said to be the support of  $A_1$  is designate by  $A_1^*$ .

**Definition 2.3** [15] Let  $A_1$ ,  $C_1 \in F_1$   $P_1(D_1)$  such that  $A_1$   $(d_1) \leq C_1$   $(d_1)$ ,  $\forall d_1 \in D_1$  then  $A_1$  is said to be contained in  $C_1$  and it is designate by  $A_1 \subseteq C_1$ 

**Definition 2.4** [15] Let  $B_1 \subseteq A_1$  and  $d_1 \in [0,1]$  we defined  $d_{1_{B_1}} \in F_1$   $P_1(D_1)$  as

$$d_{1_{C_1}}$$
 (a) =  $\begin{cases} d_1, for \ a_1 \in B_1 \\ 0, for \ a_1 \in A_1 \end{cases}$ 

If  $B_1$  is a singleton  $\{b_1\}$  then  $D_{\{b_1\}}$  is called a fuzzy point.

For any collection  $\{A_{i_1}, i_1 \in I_1\}$  of fuzzy subset of  $D_1$ , where  $I_1$  is an index set the least upper bound (L.U.B.)  $\bigcup_{i_1 \in I_1} A_{i_1}$  and greatest lower bound (G.L.B)  $\bigcap_{i_1 \in I_1} A_{i_1}$  of  $A_{i_1}$  are given by

$$\begin{split} & (\bigcup_{i_1 \,\in\, I_1} \, A_{i_1}) \ \, (d_1) \,=\, \bigvee_{i_1 \,\in\, I_1} \, A_{i_1} \,\, (d_1), \ \, \forall \,\, d_1 \,\in\, D_1. \\ & (\bigcap_{i_1 \,\in\, I_1} \, A_{i_1}) \,\, (d_1) \,=\, \bigwedge_{i_1 \,\in\, I_1} \, A_{i_1} \,\, (d_1), \ \, \forall \, d_1 \,\in\, D_1 \end{split}$$

### Fuzzy subgroup

In this section, we discuss the concept of a fuzzy subgroup in details (c.f.,[1]).

Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

**Definition 2.5 Fuzzy subgroup** (or  $F_1$  ( $G_1$ )) Let  $G_1$  be any group, we define the binary operation o' and unary operation  $^{-1}$  on  $F_1P_1$  ( $G_1$ ) as follows,  $\forall A_1$ ,  $C_1 \in F_1P_1$  ( $G_1$ ) and  $\forall d_1 \in G_1$ 

$$\begin{array}{l} (\mathsf{A}_1 \circ \mathsf{C}_1) \ (d_1) = \vee \{ \mathsf{A}_1 \ (\mathsf{y}_1) \wedge \mathsf{C}_1 \ (\mathsf{z}_1) : \mathsf{y}_1 \ \mathsf{z}_1 = d_1, \forall \ \mathsf{y}_1 \ , \ \mathsf{z}_1 \in \mathit{G}_1 \} \\ \mathsf{A}_1^{-1} (d_1) = \mathsf{A}_1 \ (d_1^{-1}) \end{array}$$

**Proposition 2.1** [3] If  $A_1 \in F_1$  ( $G_1$ ), then for all  $d_1 \in G_1$ 

(i) 
$$A_1(e_1) \ge A_1(d_1)$$

(ii) 
$$A_1(d_1) = A_1(d_1^{-1})$$

$$\begin{array}{lll} \textbf{Proof (i)} & \text{Let } d_1 \in A_1, \text{ then } d_1 \, d_1^{-1} = e_1 \\ & A_1 \, (e_1) \, = \, A_1 \, (d_1 \, d_1^{-1}) \\ & \geq \, A_1 \, (d_1) \wedge A_1 \, (d_1^{-1}) \\ & \geq \, A_1 \, (d_1) \wedge A_1 \, (d_1) = A_1 \, (d_1) \\ & & \therefore \quad A_1 \, (e_1) \, \geq \, A_1 \, (d_1), \, \forall \, d_1 \in G_1 \\ & \text{(ii)} & A_1 \, (d_1) = \, A_1 \, (d_1^{-1})^{-1} \\ & \geq \, A_1 \, (d_1^{-1}) \\ & \geq \, A_1 \, (d_1) \end{array}$$

 $A_1(d_1) = A_1(d_1^{-1})$ 

### Anti fuzzy subgroup

Finally,

In this section we discuss the basic concepts of anti fuzzy subgroup of  $G_1$ , [5]

**Definition 2.6** A fuzzy subset  $A_1$  of  $G_1$  is said to be anti fuzzy group of  $G_1$ , and is denoted as anti  $F_1$  ( $G_1$ ) if for all  $G_1$ ,  $G_2$  if  $G_1$  is said to be anti fuzzy group of  $G_2$ , and is denoted as anti  $G_1$  if for all  $G_2$  if for all  $G_2$  if for all  $G_2$  if  $G_3$  is said to be anti-fuzzy group of  $G_3$ , and is denoted as anti-fuzzy group of  $G_3$ .

(i) 
$$A_1(d_1 \cdot c_1) \le \max\{A_1(d_1), A(c_1)\}$$

(ii) 
$$A_1(d_1^{-1}) = A_1(d_1)$$

**Definition 2.7** Let  $G_1$  be any group we define the binary operation 'o' and unary operation'<sup>-1</sup>' on anti-fuzzy group of  $G_1$  as follows  $\forall A_1, B_1 \in \text{anti } F_1(G_1)$  and  $\forall d_1 \in G_1$ 

i. 
$$(A_1B_1)(d_1) = \Lambda \{ A_1(c_1) \lor B_1(p_1) : c_1 p_1 = d_1, \forall c_1, p_1 \in G_1 \}$$

ii. 
$$A_1(d_1^{-1}) = A_1^{-1}(d_1) \ \forall \ d_1 \in G_1$$

**Proposition 2.2** [5] Suppose  $A_1, B_1 \in \text{anti } F_1 \vee P_1(G_1)$  also  $A_{1i}$  anti  $F_1 P_1(G_1)$  for each  $i \in I$ , the following holds

(i) 
$$(A_1 \circ B_1) (d_1) = \bigwedge_{c_1 \in G_1} \{A_1 (c_1) \vee B_1 (c_1^{-1} d_1)\}$$

$$= \bigwedge_{c_1 \in G_1} \{A_1 (d_1 c_1^{-1}) \vee B_1 (c_1)\}$$
(ii) 
$$(a_{c_1} \circ A_1) (d_1) = A_1 (c_1^{-1} d_1) \quad \forall d_1, c_1 \in G_1$$

$$(A_1 \circ a_{c_1}) (d_1) = A_1 (d_1 c_1^{-1}) \quad d_1, c_1 \in G_1$$

**PROOF:**- (i) We have  $d_1, c_1 \in G_1 \Rightarrow c_1^{-1} \in G_1$ 

$$(d_1 c_1^{-1}) c_1 = d_1 (c_1^{-1} c_1) = d_1 e = d_1$$
  
Also  $c_1 (c_1^{-1} d_1) = (c_1 c_1^{-1}) d_1 = e d_1 = d_1$ 

$$\begin{split} \{ \mathbf{A}_{1} \; (d_{1} \; c_{1}^{-1}) \vee \mathbf{B}_{1} \; (c_{1}) &= \wedge_{c_{1} \in \mathsf{G}_{1}} \{ (\; \mathbf{A}_{1} \; (d_{1}) \vee \mathsf{A}_{1} \; (c_{1}^{-1}) \vee \mathsf{B}_{1} \; (c_{1}) \} \\ &= \wedge_{c_{1} \in \mathsf{G}_{1}} \{ (\; \mathbf{A}_{1} \; (d_{1}) \vee (\; \wedge \; \mathsf{A}_{1} \; (c_{1}^{-1}) \vee \mathsf{B}_{1} \; (c_{1}) \} \\ &= \wedge_{c_{1} \in \mathsf{G}_{1}} \{ (\; \mathbf{A}_{1} \; (d_{1}) \vee (\; \mathsf{A}_{1} \; o \; \mathsf{B}_{1}) \; (c_{1}^{-1} c_{1}) \} \\ &= \wedge_{c_{1} \in \mathsf{G}_{1}} \{ \; \mathsf{A}_{1} \; o \; (\; \mathsf{A}_{1} \; o \; \mathsf{B}_{1}) \; (d_{1} e) \\ &= (\; \mathsf{A}_{1} \; o \; \mathsf{B}_{1}) \; d_{1}, \; \forall d_{1} \in \mathsf{G}_{1} \end{split}$$

Similarly, we get

$$\begin{split} \wedge_{c_{1} \in G_{1}} \left\{ \ A_{1} \left( c_{1} \right) \vee B_{1} \left( c_{1}^{-1} d_{1} \right) \right\} &= \left( A_{1} \circ B_{1} \right) \left( d_{1} \right) \ \forall \ d_{1} \in G_{1} \\ \text{(ii)} \qquad \left( a_{c_{1}} \circ A_{1} \right) \left( d_{1} \right) &= \wedge_{c_{1} \in G_{1}} \left\{ A_{1} \left( c_{1}^{-1} d_{1} \right) \vee A_{1} \left( d_{1} \right) \right\} \\ &= \wedge_{c_{1} \in G_{1}} \left\{ \ A_{1} \left( c_{1}^{-1} \right) \vee A_{1} \left( d_{1} \right) \vee A_{1} \left( d_{1} \right) \right\} \\ &= \wedge_{c_{1} \in G_{1}} \left\{ \ A_{1} \left( c_{1}^{-1} \right) \vee A_{1} \left( d_{1} \right) \right\} \end{split}$$

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538

Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

Also,

$$\begin{split} \left(\mathsf{A}_{1} \circ a_{c_{1}}\right)\left(d_{1}\right) &= \land \ c_{1 \in \mathsf{G}_{1}} \{\,\mathsf{A}_{1}\left(d_{1}\right) \lor \mathsf{A}_{1}\left(d_{1} \ c_{1}^{-1}\right)\} \\ &= \land \ c_{1 \in \mathsf{G}_{1}} \{\,\mathsf{A}_{1}\left(d_{1}\right) \lor \mathsf{A}_{1}\left(d_{1}\right) \lor \mathsf{A}_{1}\left(c_{1}^{-1}\right)\} \\ &= \land \ c_{1 \in \mathsf{G}_{1}} \{\,\mathsf{A}_{1}\left(d_{1}\right) \lor \mathsf{A}_{1}\left(c_{1}^{-1}\right)\} \\ &= \mathsf{A}_{1}\left(d_{1} \ c_{1}^{-1}\right) \ d_{1} \ , c_{1} \in \mathsf{G}_{1} \end{split}$$

 $= A_1 (c_1^{-1}d_1) \ \forall \ d_1, c_1 \in G_1$ 

### Fuzzy homomorphism

In this section author have extend the properties of fuzzy homomorphism in abelian fuzzy subgroup and anti-abelian fuzzy subgroup

### III. ABELIAN FUZZY SUBGROUP [6]

**Definition 2.8** If  $A_1 \in F_1$  ( $G_1$ ) and if  $A_1$  ( $d_1$   $c_1$ ) =  $A_1$  ( $c_1$   $d_1$ ) for all  $d_1$ ,  $c_1 \in G_1$  then  $A_1$  is called an abelian fuzzy subgroup of  $G_1$  **Proposition 3.1:-** If  $f_1 : G_1 \to G_2$  be a homomorphism of group  $G_1$  into  $G_2$ . Let  $A_1 \in F_1$  ( $G_1$ ) is abelian fuzzy sub group then expression that  $f_1$  ( $A_1$ )  $\in F_1$  ( $G_2$ ) is also an abelian fuzzy subgroup.

**PROOF:-** Let  $m_1, n_1 \in G_2$  then

$$\begin{split} (f_1 \; (\mathsf{A}_1)) \; (\mathsf{m}_1 \; \mathsf{n}_1) \; &= \; \mathsf{V} \{ \mathsf{A}_1 \; (\mathsf{p}_1) : \mathsf{p}_1 \in \mathsf{G}_1, f_1 \; (\mathsf{p}_1) = \mathsf{m}_1 \; \mathsf{n}_1 \} \\ \; &\geq \; \mathsf{V} \{ \mathsf{A}_1 \; (d_1 \; c_1) : d_1, \, c_1 \in \mathsf{G}_1, \, f_1 \; (d_1) = \mathsf{m}_1, \, f_1 \; (c_1) = \mathsf{n}_1 \} \\ \; &= \; \mathsf{V} \{ \mathsf{A}_1 \; (c_1 \; d_1) : d_1, \, c_1 \in \mathsf{G}_1, \, f_1 \; (d_1) = \mathsf{m}_1, \; f_1 \; (c_1) = \mathsf{n}_1 \} \\ \; &= \; \mathsf{V} \{ \mathsf{A}_1 \; (c_1) \wedge \mathsf{A}_1 \; (d_1) : d_1, \, c_1 \in \mathsf{G}_1, \, f_1 \; (d_1) = \mathsf{m}_1, \, f_1 \; (c_1) = \mathsf{n}_1 \} \\ \; &= \; \mathsf{V} \{ \; \mathsf{A}_1 \; (c_1) : c_1 \in \mathsf{G}_1 \; , \, f_1 \; (c_1) = \mathsf{m}_1 \} \; \wedge \; \{ \mathsf{V} \{ \; \mathsf{A}_1 \; (d_1) : c_1 \in \mathsf{G}_1 \; , \, f_1 \; (d_1) = \mathsf{n}_1 \} \\ \; &= \; f_1 \; (\mathsf{A}_1) \; (\mathsf{m}_1) \wedge f_1 \; (\mathsf{A}_1) \; (\mathsf{n}_1) \\ \; &= \; (f_1 \; (\mathsf{A}_1)) \; (\mathsf{m}_1 \; \mathsf{n}_1) \; \; \forall \; \mathsf{m}_1, \, \mathsf{n}_1 \in \mathsf{G}_2 \end{split}$$

Hence,  $f_1(A_1) \in F_1(G_2)$  is an abelian fuzzy subgroup (ABFSG) of  $G_2$ .

**Proposition 3.2:-** Let  $f_1: G_1 \to G_2$  is a homomorphism of group  $G_1$  into a group  $G_2$ . If  $A_1 \in F_1(G_2)$  is an abelian fuzzy subgroup of  $G_2$ . Then show that  $f_1^{-1}(A_1) \in F_1(G_1)$  is also an abelian fuzzy subgroup of  $G_1$ .

**PROOF:-** Let  $f_1: G_1 \to G_2$  be homomorphism of group  $G_1$  into group  $G_2$ . Let  $A_1 \in F_1(G_2)$  be an abelian fuzzy subgroup of  $G_1$ . Then show  $f_1^{-1}(A_1) \in F_1(G_1)$  is also an abelian fuzzy subgroup of  $G_1$ .

Suppose  $d_1, c_1 \in G_1$  we have

$$(f_1^{-1}(A_1)) (d_1 c_1) = A_1 (f_1 (d_1 c_1))$$

$$= A_1 (f_1 (d_1) f_1 (c_1)), \qquad \text{since } f_1 \text{ is a homomorphism}$$

$$= A_1 (f_1 (c_1) f_1 (d_1)), \qquad \text{since } G_2 \text{ is an abelian subgroup}$$

$$= A_1 (f (c_1 d_1))$$

$$= (f_1^{-1}(A_1)) (c_1 d_1) \forall d_1, c_1 \in G_1.$$

Hence,  $f_1^{-1}(A_1) \in F_1(G_1)$  is an abelian fuzzy subgroup of  $G_1$ .

**PROOF:-** Let  $\alpha_1, \beta_1 \in G_1''$ . If possible, let  $\alpha_1 \notin (g_1 \circ f_1) (G_1)$  or  $\beta_1 \notin (g_1 \circ f_1) (G_1)$  then

$$(g_1 \circ f_1) A_1 (\alpha_1) \wedge (g_1 \circ f_1) A_1 (\beta_1) = 0 \le (g_1 \circ f_1) A_1 (\alpha_1 \beta_1).$$

If we suppose  $\alpha_1 \notin (g_1 \circ f_1) (G_1)$  then  $\alpha_1^{-1} \notin (g_1 \circ f_1) (G_1)$ 

Implies that  $(g_1 \circ f_1) (A_1) \alpha_1 = 0 = (g_1 \circ f_1) (A_1) \alpha_1^{-1}$ 

Again if we assume

$$\alpha_1$$
 = (g\_1 o  $f_1$  ) (d\_1) and  $\beta_1$  = (g\_1 o  $f_1$ ) (c\_1 ) for some  $d_1,$   $c_1$   $\in$   $\mathsf{G}_1.$ 

Also

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538

Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

$$\begin{split} &= \vee \; \{ \; \mathsf{A}_1 \; (d_1) : d_1 \in \mathsf{G}_1, \, (\mathsf{g}_1 \circ f_1) \; d_1 = \alpha_1 \} \; \wedge \; \{ \vee \; ((\mathsf{A}_1 \; (c_1)) : c_1 \in \mathsf{G}_1, \, (\mathsf{g}_1 \circ f_1) \; c_1 \in \beta_1 \} \\ &= (\mathsf{g}_1 \circ f_1) \; \mathsf{A}_1 \; (\alpha_1) \; \wedge \; (\mathsf{g}_1 \circ f_1) \; \mathsf{A}_1 \; (\beta_1) \\ \\ &= \vee \; \{ \; \mathsf{A}_1 \; (p_1) : p_1 \in \mathsf{G}, \, (\mathsf{g}_1 \circ f_1) \; p_1 = \alpha_1^{-1} \; \} \\ &= \vee \; \{ \; \mathsf{A}_1 \; (p_1^{-1}) : p_1 \in \mathsf{G}, \, (\mathsf{g}_1 \circ f_1) \; p_1^{-1} = \alpha_1 \} \end{split}$$

Hence,

Also,

 $(g_1 \circ f_1) (A_1) \in F_1 (G_1'')$ 

 $(g_1 \circ f_1) A_1 \alpha_1^{-1}$ 

**Proposition 3.4:-** Suppose  $f_1: G_1 \to G_1'$  and  $g_1: G_1' \to G_1''$  where  $f_1$  and  $g_1$  are homomorphism of a group  $G_1$  into group  $G_1'$  and from a group  $G_1$  into a group  $G_1$  respectively then the composition homomorphism  $(g_1 \circ f_1)$  from  $G_1$  into  $G_1$ . Let  $A_1 \in F_1$   $(G_1)$  is an abelian group then prove that  $(g_1 \circ f_1)(A_1) \in F_1(G_1'')$  is also an abelian group.

**PROOF**:-Let  $\alpha_1$   $\beta_1 \in G_1''$  then we have by extension principle

 $= (g_1 \circ f_1) A_1 (\alpha_1)$ 

$$(g_1 \circ f_1) (A_1) (\alpha_1, \beta_1) \\ = \bigvee \{ A_1 (p_1) : p_1 G_1, (g_1 \circ f_1) p_1 = \alpha_1 \beta_1) \} \\ \geq \bigvee \{ A_1 (d_1 c_1) : d_1, c_1 \in G_1, (g_1 \circ f_1) \ d_1 = \alpha_1, (g_1 \circ f_1) \ c_1 = \beta_1 \} \\ = \bigvee \{ A_1 (c_1 d_1) : d_1, c_1 \in G_1, (g_1 \circ f_1) \ d_1 = \alpha_1, (g_1 \circ f_1) \ c_1 = \beta_1 \} \\ \text{Since } A_1 \in F_1(G_1) \text{ is an abelian group}$$
 
$$(g_1 \circ f_1) (A_1) (\alpha_1, \beta_1) \\ = \bigvee \{ A_1(c_1) \land A_1 (d_1) : d_1, c_1 \in G_1, (g_1 \circ f_1) \ d_1 = \alpha_1, (g_1 \circ f_1) \ c_1 = \beta_1 \} \\ = \bigvee [ \{ A_1 (c_1) \land A_1 (d_1) : d_1, c_1 \in G_1, (g_1 \circ f_1) \ d_1 = \alpha_1, (g_1 \circ f_1) \ d_1 \in G_1, (g_1 \circ f_1) \ d_1 = \alpha_1 ] \\ = (g_1 \circ f_1) (A_1) (\beta_1) \land (g_1 \circ f_1) (A_1) (\alpha_1) \\ = (g_1 \circ f_1) (A_1) (\beta_1 \alpha_1)$$
 Hence, 
$$(g_1 \circ f_1) A_1 \in F_1 (G_1'') \text{ is an abelian fuzzy subgroup of } G_1''.$$

### Proposition on abelian anti fuzzy subgroup

**Proposition 3.5** If  $f_1: G_1 \to G_2$  be a homomorphism of group  $G_1$  into group  $G_2$ . Let  $A_1 \in \text{anti } F_1(G_1)$  is abelian anti fuzzy subgroup of  $G_1$ , then show that  $f_1 \in G_2 \in G_2$  is also abelian anti fuzzy subgroup of  $G_2$ . **PROOF:** Let  $\alpha_1, \beta_1$ 

```
(f_1 A_1)(\alpha_1 \beta_1)
                    = \Lambda \{A_1(p_1) : p_1 \in G_1, f_1(p_1) = \alpha_1 \beta_1\}
                    = \wedge \{A_1(d_1c_1): d_1, c_1 \in G_1, f_1(d_1) = \alpha_1, f_1(c_1) = \beta_1\}
                   = \wedge \{A_1(c_1 d_1) : d_1, c_1 \in G_1, f_1(d_1) = \alpha_1, f_1(c_1) = \beta_1\}
                   \leq \wedge \{A_1(c_1) \vee A_1(d_1) : d_1, c_1 \in G_1, f_1(d_1) = \alpha_1, f_1(c_1) = \beta_1\}
                    = \wedge \{A_1(c_1) : c_1 \in G_1, f_1(c_1) = \beta_1 \vee (\wedge f_1(d_1) : d_1 \in G_1, f_1(d_1) = \alpha_1\})
                   = \{f_1 (A_1) \lor f_1 (A_1)\} (\beta_1 \alpha_1)
                    = (f_1 (A_1)) (\beta_1 \alpha_1) \quad \forall \alpha_1, \beta_1 \in G_2
```

Hence  $f_1$  (A<sub>1</sub>)  $\in$  anti F<sub>1</sub> (G<sub>2</sub>) is abelian anti-fuzzy subgroup of G<sub>2</sub>

**Proposition 3.6:-** Let  $f_1: G_1 \square \square G_2$  is a homomorphism of a group  $G_1$  into a group  $G_2$ . If  $A_1 \square$  anti  $F_1(G_2)$  is an abelian anti-fuzzy subgroup of  $G_2$  then show that  $f_1^{-1}(A_1) \Box$  anti  $F_1(G_1)$  is also an abelian anti-fuzzy subgroup of  $G_1$ .

**PROOF**: Suppose  $f_1: G_1 \square \square G_2$  is a homomorphism of a group  $G_1$  into a group  $G_2$ . Let  $A_1 \square$  anti  $F_1(G_2)$  be abelian anti-fuzzy subgroup of  $G_2$ . Then show that  $f_1^{-1}(A_1) \square$  anti  $F_1(G_1)$  is also an abelian anti-fuzzy subgroup  $G_1$ . Let  $d_1 \square \square c_1 \square \square G_1$ 

```
We have (f_1^{-1}(A_1))(d_1 c_1) = A_1(f_1(d_1 c_1))
                                 = A_1 (f_1 (d_1) f_1 (c_1))
                                                                since f_1 is a homomorphism
                                 = A_1 (f_1 (c_1) f_1 (d_1))
                                                                since G<sub>2</sub> is an abelian subgroup
                                 = A_1 (f_1 (c_1 d_1))
```

$$= f_1^{-1}(A_1) (c_1 d_1)$$

Finally,  $f_1^{-1}(A_1) \in \text{anti } F_1(G_1) \text{ is an abelian anti-fuzzy subgroup.}$ 

**Proposition 3.7:** Suppose  $f_1: G_1 \to G_1'$  and  $g_1: G_1' \to G_1''$  where  $f_1$  and  $g_1$  are homomorphism of a group  $G_1$  into group  $G_1'$  and from a group  $G_1'$  into a group  $G_1''$  respectively. Let  $A_1 \in$  anti  $F_1(G_1)$  is an abelian anti fuzzy subgroup of  $G_1$  then prove that the image of composition homo – morphism of fuzzy anti subgroup  $A_1$  of  $G_1''$  is also an abelian anti fuzzy subgroup of  $G_1''$ 

**PROOF:** - Let  $\alpha_1 \beta_1 \in G_1$ " then we have by extension principle

$$(g_1 \circ f_1) (A_1) (\alpha_1 \beta_1)$$

$$= \Lambda \{ A_1(p_1) : p_1 \in G_1, (g_1 \circ f_1) p_1 = \alpha_1 \beta_1 \} \}$$

$$\leq \Lambda \{ A_1(d_1 c_1) : d_1, c_1 \in G_1, (g_1 \circ f_1) \ d_1 = \alpha_1, (g_1 \circ f_1) \ c_1 = \beta_1 \}$$

$$= \wedge \{ A_1 (c_1 d_1) : d_1, c_1 \in G_1, (g_1 \circ f_1) d_1 = \alpha_1 (g_1 \circ f_1) c_1 \beta_1 \}$$

$$\leq \; \wedge \; \{ \; \mathsf{A}_1(c_1) \; \forall \; \mathsf{A}_1 \; (d_1) \; : \; d_1, \; c_1 \in \mathsf{G}_1, \; (\mathsf{g}_1 \; \mathsf{o} \; f_1) \; d_1 = \alpha_1, \; (\mathsf{g}_1 \; \mathsf{o} \; f_1) \; \; c_1 = \beta_1 \}$$

$$= \wedge \ \left[ \left\{ \mathsf{A}_1 \ (c_1) \ c_1 \in \mathsf{G}_1, \, (\mathsf{g}_1 \ \mathsf{o} \ f_1) \ c_1 = \beta_1 \right\} \right] \ \mathsf{V} \left[ \ \wedge \ \mathsf{A} \ (d_1) : d_1 \in \mathsf{G}_1, \, (\mathsf{g}_1 \ \mathsf{o} \ f_1) \ d_1 \right]$$

$$= \alpha_1 (g_1 \circ f_1) (A_1) (\beta_1) \vee (g_1 \circ f_1) (A_1) (\alpha_1)$$

= 
$$(g_1 \circ f_1) (A_1) (\beta_1 \alpha_1)$$

Finally,

 $(g_1 \circ f_1) A_1 F_1 (G_1'')$  is an abelian anti fuzzy subgroup of  $G_1''$ .

### IV. CHARACTERISTIC FUZZY SUBGROUP [13]

**DEFINITION: 4.1:-** Let  $A_1$  be a fuzzy subgroup of  $G_1$  and  $\phi$  be a function from  $G_1$  into itself. Now define the fuzzy subset  $A_1^{\phi}$  of  $G_1$  by  $A_1^{\phi}(d_1) = A_1(d_1^{\phi})$ , where  $d_1^{\phi} = \phi(d_1) A_1$  subgroup K of group  $G_1$  is called a characteristic subgroup if  $K^{\phi} = K$  for every automorphism  $\phi$  of  $G_1$ , where  $K^{\phi}$  denote  $\phi(k)$ .

**Definition 4.2 Characteristic fuzzy subgroup**: A fuzzy subgroup  $A_1$  on a group K is called a fuzzy characteristic subgroup of  $G_1$  if  $A_1^{\ \phi}(d_1) = A_1(d_1)$  for every automorphism  $\phi$  of  $G_1$  and for all  $d_1 \in G_1$ 

**Proposition 4.1**:- Let  $A_1$  is a fuzzy subgroup of a group  $G_1$  if

- a. If  $\phi$  is a homomorphism of  $G_1$  into itself, then  $A_1^{\phi}$  is a fuzzy subgroup of  $G_1$
- b. If  $A_1$  is a fuzzy characteristic subgroup of  $G_1$  then  $A_1$  is a normal.

**PROOF**: (i)  $d_1, c_1 \in G_1$  then

$$A_1^{\phi}(d_1 \ c_1) = A_1 (d_1 \ c_1)^{\phi}$$
  
=  $A_1 (d_1^{\phi} c_1^{\phi})$ 

Subsequently  $\phi$  is a homomorphism and  $A_1$  is a fuzzy subgroup of  $G_1$ .

$$A_{1} (d_{1}^{\phi} c_{1}^{\phi}) \geq A_{1} (d_{1}^{\phi}) \wedge A_{1} (c_{1}^{\phi})$$

$$A_{1}^{\phi} (d_{1} c_{1}) = A_{1}^{\phi} (d_{1}) \wedge A_{1}^{\phi} (c_{1})$$
Also,
$$A_{1}^{\phi} (d_{1}^{-1}) = A_{1} (d_{1}^{-1})^{\phi}$$

$$= A_{1} (d_{1}^{\phi})^{-1}$$

$$= A_{1} (d_{1}^{\phi})$$

$$= A_{1}^{\phi} (d_{1})$$

Hence,

 $A_1^{\Phi}$  is a fuzzy subgroup of  $G_1$ .

(ii) Let  $d_1$ ,  $c_1 \in G_1$  to prove that  $A_1$  is normal we have to show

$$A_1 (d_1 c_1) = A_1 (c_1 d_1)$$

Let  $\phi$  be function from  $G_1$  into itself definition by

$$\phi(z) = d_1^{-1} z d_1 , \forall z \in G_1$$

Since  $A_1$  is a fuzzy characteristic subgroup of  $G_1$ ,

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538

Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

$$= A_1 (d_1^{-1} (d_1 c_1) d_1)$$
  
=  $A_1 (c_1 d_1)$ 

Hence  $A_1$  is normal subgroup of  $G_1$ .

### V. MAIN RESULT

**Proposition 5.1**: Let  $A_1$ ,  $C_1$  be the fuzzy subgroup of  $G_1$  if

- (i) If  $\phi$  is a homomorphism of  $G_1$  into itself, then  $A_1^{\phi}$  is a fuzzy subgroup of  $G_1$
- (ii) If  $A_1$  is a fuzzy characteristic subgroup of  $G_1$  then  $A_1$  is a normal.

**PROOF**: (i)  $d_1, c_1 \in G_1$  then

$$A_1^{\phi}(d_1 \ c_1) = A_1 (d_1 \ c_1)^{\phi}$$
  
=  $A_1 (d_1^{\phi} c_1^{\phi})$ 

Subsequently  $\phi$  is a homomorphism and  $A_1$  is a fuzzy subgroup of  $G_1$ .

$$A_{1} (d_{1} {}^{\phi}c_{1} {}^{\phi}) \ge A_{1} (d_{1} {}^{\phi}) \wedge A_{1} (c_{1} {}^{\phi})$$

$$A_{1} {}^{\phi}(d_{1} c_{1}) = A_{1} {}^{\phi}(d_{1}) \wedge A_{1} {}^{\phi}(c_{1})$$

$$A_{1} {}^{\phi}(d_{1}^{-1}) = A_{1} (d_{1}^{-1})^{\phi}$$

$$= A_{1} (d_{1}^{\phi})^{-1}$$

$$= A_{1} (d_{1}^{\phi})$$

$$= A_{1} {}^{\phi}(d_{1})$$

Hence.

Also,

 $A_1^{\ \phi}$  is a fuzzy subgroup of  $G_1$ .

**Proposition 5.2**: Let  $A_1$ ,  $C_1$  be the fuzzy subgroups of a group  $G_1$ . Then the following statement hold

- (i) If  $\phi$  is a homomorphism of  $G_1$  into itself. Then  $A_1^{\phi}$  &  $C_1^{\phi}$  are fuzzy subgroup of  $G_1$ . Then show that (a)  $(A_1 \cup C_1)^{\phi}$  and (b)  $(A_1 \cap C_1)^{\phi}$  are fuzzy subgroup of  $G_1$ .
- (ii) If  $A_1$ ,  $C_1$  are fuzzy characteristic subgroup of  $G_1$ , so  $A_1$  and  $C_1$  are normal then we have to show that  $A_1 \cup C_1$  and  $A_1 \cap C_1$  are also normal.

**Proof**:(i) Let  $A_1, C_1 \in F_1P_1$  ( $G_1$ ) and  $\phi$  is a homomorphism of  $G_1$  into itself. Let  $d_1 c_1 \in G_1$ , we have

$$(A_{1} \cup C_{1})^{\Phi} ((d_{1} c_{1})) = (A_{1} \cup C_{1}) ((d_{1} c_{1})^{\Phi})$$

$$= (A_{1} \cup C_{1}) (d_{1}^{\Phi} c_{1}^{\Phi})$$

$$= A_{1} (d_{1}^{\Phi} c_{1}^{\Phi}) \vee C_{1} (d_{1}^{\Phi} c_{1}^{\Phi})$$

$$\geq (A_{1} (d_{1}^{\Phi}) \wedge A_{1} (c_{1}^{\Phi})) \vee (C_{1} (d_{1}^{\Phi}) \wedge C_{1} (c_{1}^{\Phi}))$$

$$= (A_{1} (d_{1}^{\Phi}) \vee C_{1} (d_{1}^{\Phi})) \wedge (A_{1} (c_{1}^{\Phi}) \vee C_{1} (c_{1}^{\Phi}))$$

$$= (A_{1} \cup C_{1}) d_{1}^{\Phi} \wedge (A_{1} \cup C_{1}) c_{1}^{\Phi}$$

$$(A_{1} \cup C_{1})^{\Phi} (d_{1} c_{1}) \geq (A_{1} \cup C_{1})^{\Phi} (d_{1}) \wedge (A_{1} \cup C_{1})^{\Phi} (c_{1}^{\Phi})$$

$$(A_{1} \cup C_{1})^{\Phi} (d_{1}^{-1}) = (A_{1} \cup C_{1})^{\Phi} (d_{1}^{-1})^{\Phi}$$

$$= (A_{1} \cup C_{1}) ((d_{1}^{\Phi})^{-1})$$

$$= A_{1} (d_{1}^{\Phi}) \wedge C_{1} (d_{1}^{\Phi})^{-1} \text{ since } A_{1}, C_{1} \in F_{1} (G_{1})$$

$$= (A_{1} \cup C_{1}) (d_{1}^{\Phi})$$

$$= (A_{1} \cup C_{1}) (d_{1}^{\Phi})$$

$$= (A_{1} \cup C_{1})^{\Phi} (d_{1})$$

Hence,

 $(A_1 \cup C_1) \in F_1(G_1)$ 

Similarly,

i (b) we have

$$(A_{1} \cap C_{1})^{\phi}(d_{1} c_{1}) = (A_{1} \cap C_{1}) ((d_{1} c_{1})^{\phi})$$

$$= (A_{1} \cap C_{1}) (d_{1}^{\phi} c_{1}^{\phi})$$

$$= A_{1} (d_{1}^{\phi} c_{1}^{\phi}) \wedge C_{1} (d_{1}^{\phi} c_{1}^{\phi})$$

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538 Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

$$\geq \left( A_{1} \left( d_{1}^{\ \phi} \right) \wedge A_{1} \left( c_{1}^{\ \phi} \right) \right) \wedge \left( C_{1} \left( d_{1}^{\ \phi} \right) \wedge C_{1} \left( c_{1}^{\ \phi} \right) \right)$$

$$= \left( A_{1} \left( d_{1}^{\ \phi} \right) \wedge C_{1} \left( d_{1}^{\ \phi} \right) \right) \wedge \left( A_{1} \left( c_{1}^{\ \phi} \right) \wedge C_{1} \left( c_{1}^{\ \phi} \right) \right)$$

$$= \left( A_{1} \cap C_{1} \right) d_{1}^{\ \phi} \wedge \left( A_{1} \cap C_{1} \right) c_{1}^{\ \phi}$$

$$= \left( A_{1} \cap C_{1} \right) \phi \left( d_{1} \right) \wedge \left( A_{1} \cap C_{1} \right) \phi c_{1}$$
i.e., 
$$(A_{1} \cap C_{1})^{\phi} (d_{1} c_{1}) \geq \left( A_{1} \cap C_{1} \right)^{\phi} (d_{1}) \wedge \left( A_{1} \cap C_{1} \right)^{\phi} (c_{1})$$

$$Also , (A_{1} \cap C_{1})^{\phi} (d_{1}^{\ -1}) = \left( A_{1} \cap C_{1} \right)^{\phi} \left( d_{1}^{\ -1} \right)^{\phi}$$

$$= \left( A_{1} \cap C_{1} \right) \left( \left( d_{1}^{\ \phi} \right)^{-1} \right)$$

$$= A_{1} \left( d_{1}^{\ \phi} \right)^{-1} \wedge C_{1} \left( d_{1}^{\ \phi} \right)^{-1} \text{ since } A_{1}, C_{1} \in F_{1} \left( G_{1} \right)$$

$$= A_{1} \left( d_{1}^{\ \phi} \right) \wedge C_{1} \left( d_{1}^{\ \phi} \right)$$

$$= \left( A_{1} \cap C_{1} \right) \left( d_{1}^{\ \phi} \right)$$

$$= \left( A_{1} \cap C_{1} \right) \phi \left( d_{1} \right)$$

$$Hence, \qquad (A_{1} \cap C_{1}) \in F_{1} \left( G_{1} \right)$$

Hence,

(ii) Let  $d_1, c_1 \in G_1$  to prove that  $A_1$  is normal we have to show

$$A_1(d_1 c_1) = A_1(c_1 d_1)$$

Let  $\phi$  be function from  $G_1$  into itself definition by

$$\phi(z) = d_1^{-1} z d_1 , \forall z \in G_1$$

Since  $A_1$  is a fuzzy characteristic subgroup of  $G_1$ ,

Hence  $A_1$  is normal subgroup of  $G_1$ .

**Again,** Suppose  $d_1, c_1 \in F_1(G_1)$  to prove that  $(A_1 \cap C_1)$  is a normal fuzzy subgroup of  $G_1$  it is necessary to show  $(A_1 \cap C_1)(d_1 c_1) = (A_1 \cap C_1)(c_1 d_1)$ 

Let  $\phi$  be the function of group  $G_1$  into itself defined by

$$\phi(z) = d_1^{-1} z d_1 \quad \forall \ d_1 \in G_1$$

Since A<sub>1</sub> and C<sub>1</sub> are fuzzy characteristic subgroup of G<sub>1</sub>, hence be normal as we prove

 $(A_1 \cap C_1)^{\phi} = (A_1 \cap C_1)$ 

$$(A_1 \cap C_1)(d_1 c_1) = (A_1 \cap C_1)^{\phi}(d_1 c_1)$$

$$= (A_1 \cap C_1) (d_1 c_1)^{\phi}$$

$$= (A_1 \cap C_1) (d_1^{-1}(d_1 c_1)d_1)$$

$$= (A_1 \cap C_1) ((d_1^{-1}d_1) (c_1 d_1))$$

$$= (A_1 \cap C_1) (c_1 d_1)$$

Hence  $(A_1 \cap C_1) \in F_1(G_1)$  is normal.

Similarly,

$$(A_1 \cup C_1)^{\phi} = (A_1 \cup C_1)$$

$$(A_1 \cup C_1) (c_1 d_1) = (A_1 \cup C_1)^{\phi} (c_1 d_1)$$

$$= (A_1 \cup C_1) (c_1 d_1)^{\phi}$$

$$= (A_1 \cup C_1) (d_1^{-1} (c_1 d_1) d_1)$$

$$= (A_1 \cup C_1) (d_1^{-1} d_1) (c_1 d_1)$$

$$= (A_1 \cup C_1) (c_1 d_1)$$

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538 Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

Hence  $(A_1 \cup C_1) \in F_1(G_1)$  is also normal.

**PROPOSITION 5.3:** Let  $A_1$  is a normal fuzzy subgroup of  $G_1$  and let  $\varphi$  be a homomorphism of  $G_1$  into itself. Then  $\varphi$  induces a homomorphism  $\overline{\varphi}$  of  $\frac{G_1}{A_1}$  into itself defined by

$$\overline{\Phi}(d_1 A_1) = \Phi(d_1) A_1$$
 For all  $d_1 \in (G_1)$ 

**Proof**: Let  $d_1, c_1 \in G_1$  we have

$$d_1 A_1 = c_1 A_1$$

Then we have to show that

$$\phi(d_1)A_1 = \phi(c_1)A_1$$

Since

$$d_1 A_1 = c_1 A_1$$

we have

$$d_{1} A_{1} (d_{1}) = c_{1} A_{1} (d_{1})$$

$$\Rightarrow A_{1} (e) = A_{1} (c_{1}^{-1} d_{1})$$

$$d_{1} A_{1} (c_{1}) = c_{1} A_{1} (c_{1})$$

$$\Rightarrow A_{1} (d_{1}^{-1} c_{1}) = A_{1} (e)$$

$$A_{1} (c_{1}^{-1} d_{1}) = A_{1} (d_{1}^{-1} c_{1}) = A_{1} (e)$$

Implies that

$$(c_1^{-1}d_1), (d_1^{-1}c_1) \in A_{1_*}$$

Since we have

$$\varphi(A_{1_*}) = A_{1_*}$$

Therefore  $\phi(c_1^{-1}d_1)$  and  $\phi(d_1^{-1}c_1)$  also belong to  $A_{1_*}$ 

Which implies that

$$A_1 (\phi(c_1^{-1}d_1)) = A_1 (\phi(d_1^{-1}c_1)) = A_1 (e)$$

Let  $g \in G$ , Then

$$\varphi(d_1)A_1(g_1) = A_1 (\varphi(d_1^{-1})g_1) 
= A_1 (\varphi(d_1^{-1}) \varphi(c_1) \varphi(c_1^{-1})g_1) 
\ge A_1 (\varphi(d_1^{-1}) \varphi(c_1) \wedge A_1 (\varphi(c_1^{-1})g_1) 
= A_1 (\varphi(d_1^{-1}c_1)) \wedge ) \varphi(c_1) A_1 (g_1) 
= A_1 (e) \wedge \varphi(c_1) \wedge A_1 (g_1) 
= \varphi(c_1) A_1 (g_1)$$

Finally,

$$\phi(d_1) A_1(g_1) \ge \phi(c_1) A_1(g_1)$$
 .....(i)

Similarly, we can prove that

$$\phi(d_1) A_1(g_1) \le \phi(c_1) A_1(g_1)$$
 ....(ii)

Since  $g_1 \in G_1$  is arbitrary

Hence,

$$\phi(d_1) A_1 = \phi(c_1) A_1$$

Therefore,

we find that  $\overline{\Phi}$  is well defined

Now we have only to show that  $\overline{\Phi}$  is a homomorphism

Let  $d_1$ ,  $c_1 \in G_1$ .

Since  $\phi$  is homomorphism

$$\begin{split} & \varphi\left(d_{1}\,c_{1}\,\right) = \varphi\left(d_{1}\,\right) \varphi\left(c_{1}\,\right) \\ & \varphi\left(d_{1}\,c_{1}\,\right) A_{1} = \varphi\left(d_{1}\,\right) \varphi\left(c_{1}\,\right) A_{1}. \\ & \overline{\varphi}\left(d_{1}\,c_{1}\,\right) A_{1} = \varphi\left(d_{1}\,\right) A_{1}\,. \varphi\left(c_{1}\,\right) A_{1}. \\ & = \overline{\varphi}(d_{1}\,A_{1}\,.\,c_{1}\,A_{1}) \\ & = \overline{\varphi}(d_{1}\,A_{1}\,.\,\overline{\varphi}\left(c_{1}\,A_{1}\right). \end{split}$$

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538 Volume 10 Issue IV Apr 2022- Available at www.ijraset.com

Hence  $\overline{\Phi}$  is a homomorphism.
