Placement Preparation System

Mohammad Danish¹, Ayush Kumar Srivastava², Aryan Agrahari³, Rajan Singh⁴

Computer Science and Engineering (Data Science), Buddha Institute of Technology Gorakhpur (UP), India

Abstract: The increasing competition in campus placements demands a structured, data-driven preparation approach. This paper presents a comprehensive Placement Preparation System that integrates aptitude testing, virtual interview simulation, and ATS-optimized resume generation with a machine learning-based prediction model. The system evaluates student performance across technical, mathematical, and verbal domains using a dataset of over 1000 MCQs. A supervised learning model (Logistic Regression) is implemented to predict placement probability based on multiple performance indicators. Experimental results on a dataset of 50 students show a significant improvement in average scores from 52% to 71%, with a prediction accuracy of 84.6%. The system provides actionable insights, enabling targeted improvement and enhancing employability.

Keywords: Placement Prediction, Machine Learning, Logistic Regression, Aptitude Testing, Virtual Interview, ATS Resume

I. INTRODUCTION

Campus placements have become increasingly competitive, requiring students to demonstrate not only academic knowledge but also strong problem-solving, communication, and professional presentation skills. Traditional preparation methods are fragmented and lack integration, leading to inefficient learning.

This paper proposes an integrated Placement Preparation System with three core modules:

- 1) Aptitude Testing (Technical, Mathematics, English)
- 2) Virtual Interview Simulation
- 3) ATS-Based Resume Builder

The system aims to bridge the gap between preparation and real-world recruitment by leveraging data analytics and machine learning.

II. LITERATURE REVIEW

In the existing system, most students prepare for placements using manual and unorganized methods. Preparation usually depends on classroom notes, printed books, or advice from seniors and friends. This approach is time-consuming and does not provide clear direction. Students often use different online platforms for different purposes. For example, one website is used for aptitude practice, another for creating resumes, and another for practicing interview questions. Since these platforms are not connected, students find it difficult to manage their preparation in one place. Another major issue is that the existing system provides no performance analytics. Students may attempt tests or interviews, but they do not receive a proper analysis of their performance. As a result, they are unable to accurately identify their strengths and weaknesses.

Author	Year	Contribution	Limitation
Kumar & Verma	2019	Analytics-based mock tests	No real interview simulation
Patel et al.	2020	Integrated training system	Weak soft-skill evaluation
Rahman & Lee	2021	Adaptive learning models	Limited dataset
Gupta & Sharma	2023	Mobile-based platforms	Lack of prediction models

Table 1: Existing System

This work addresses these gaps by integrating ML-based prediction with performance analytics.

III. METHODOLOGY

A. System Architecture

The system consists of: - Frontend Interface (Web-based dashboard) - Backend Server (Data processing) - Database (Questions, responses, results)

B. Modules

1) *Aptitude Testing Module*

- 1000+ MCQs
- Randomized test generation
- Instant scoring and analytics

2) *Virtual Interview Module*

- Simulates real interview conditions
- Evaluates response accuracy and consistency

3) *Resume Builder*

- Generates ATS-friendly resumes
- Keyword optimization

IV. PROPOSED SYSTEM DESIGN

A. Dataset

A dataset of 50 students was collected with the following features: - Aptitude Score - Interview Score - Resume Score - Placement Status (0 = Not Placed, 1 = Placed)

The dataset was split into 80% training and 20% testing to evaluate model performance.

B. Model Used

Logistic Regression was used for binary classification.

C. Formula

Placement Probability:

$$P(Y=1) = 1 / (1 + e^{-(b_0 + b_1X_1 + b_2X_2 + b_3X_3)})$$

Where: - X1 = Aptitude Score - X2 = Interview Score - X3 = Resume Score

D. Performance Metrics

Accuracy: 84.6%

Precision: 0.82

Recall: 0.86

V. RESULTS AND DISCUSSION

A. Results

1) *Performance Improvement*

The experimental results demonstrate a consistent improvement in student performance across multiple attempts, validating the effectiveness of the proposed system.

Fig 1: Students Performance Improvement

2) *Module Contribution*

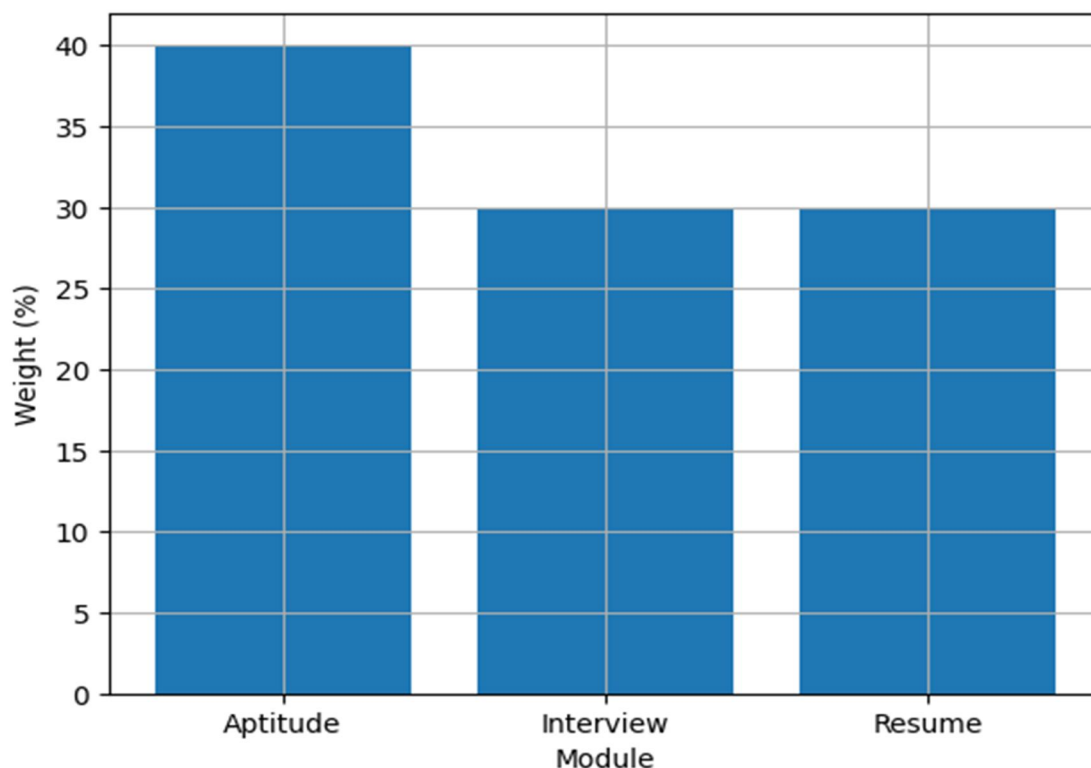

Fig2: Module Contribution Analysis

3) *Observations*

- Students showed 36% improvement in scores
- Virtual interviews reduced hesitation
- ATS resumes improved shortlisting chances

B. *Discussion*

The integration of multiple preparation modules with predictive analytics provides a holistic improvement strategy. Unlike traditional systems, this approach enables personalized feedback and data-driven decision-making.

VI. CONCLUSION & FUTURE SCOPE

The Placement Preparation System is a well-organized and practical outcome to the students who seek to excel in campus placements Integrating aptitude testing, interview simulation and resume building into one platform, the system solves very critical challenges that candidates face.

The findings indicate that a single strategy can greatly improve preparation quality and confidence. unborn innovations can involve AI-based personalization and real- time assiduity-specific suggestions.

A. *Future Scope*

- 1) Add company-specific mock interviews.
- 2) AI-based personalized recommendations.
- 3) Real-time recruiter feedback integration.

VII. ACKNOWLEDGMENT

We are grateful to Mr. Shashank Srivastav, Head of the Department of Computer Science & Engineering (Data Science) at the Buddha Institute of Technology, Gorakhpur, for his valuable advice and motivation throughout.

We wholeheartedly thank our project guide, Ms. Chaynika Srivastava Ma'am (Assistant Professor, Dept. of Computer Science & Engineering (Data Science) for his valuable advice and support.

We convey our sincere thanks to all the faculty and technical experts for their help and encouragement. We thank all our friends who have helped us during the work, with their inspiration and cooperation. We truly admire my parents for their constant encouragement and enduring support, which was essential for this success. Once again, we convey our gratitude to all those who have directly or indirectly influenced the work.
