Keywords: Website improvement, websites, Search engine optimization, search engine, search engine marketing, SEM, SEO promotion technique, Search Ranking.

I. INTRODUCTION

Search Engine Optimization (SEO) is an activity through which companies can optimize their web pages or whole sites in order to make them search engine friendly, thus getting higher positions in search results. Through this we can actually modify the content and structure of web pages so that trafficcan be increased on the website. SEO is a process which helps to improve the visibility of a website through organic searches ona search engine results page.

Search Engine Optimization can actually affect the user experience of a website, and the performance ofthat website's pages in organic search results on the major search engines such as (Google, Bing, Yahoo,Ask, AOL, etc.). then Search Engine Optimization may be viewed as a gaming strategy that involves boosting a website's page rank and traffic to the site.

A site which ranks high on search engine results page are considered as of high quality and trustworthy by search engines, and this, in turn, boosts the credibility of your business which helps in building your brand's authority. When people start trusting your brand, your credibility increases, which makes your brand more valuable and hench it creates brand awareness. As a result, you appear higher in local searches. Therefore, it is an essential ingredient in order to make your business a success.

A part from this if SEO is handled by our own then, SEO does not cost anything like other marketing strategies such as pay-per-click and many more. Search engines crawl your site 24/7, continuously promoting useful content and helping the sites/businesses to find new customers organically. Customers can seek different websites based on their needs, which is where keywords really come into play.

Search Engine Optimization not only helps to make a site search engine-friendly, but it can also improve the experience of a customer when he/she visiting your website which attracts more customers. Therefore, you truly need to enhance the user experience in order to optimise the content of your website for search engines. As much as you make your small business website convenient, then the chances increases that more and more people going to visit your website and buy what you are selling.

Traffic is redirected by SEO to the advantage of small businesses and prospective clients. Even if your stronger competitors are bigger players in the industry than you are, you can still beat them and attract more clients to visit your pages. The key is in optimization. An optimized site brings in quality traffic. Searchers are more likely to spend more time perusing a website with valuable information that matches their goal, which can eventually result in more conversions and a higher return on investment. With the creation of informative material for visitors, including text, photographs, and videos, you may improve your website's SEO. While most marketing initiatives tend to concentrate on a certain target market, SEO can assist you in attracting everyone with intent at any given time, regardless of stage of the buying funnel they are in. You can draw in more customers who could be interested in doing business with you if you target keywords rather than demographics like you do with PPC or social advertising.

Search Engine Optimization, is one of the most important techniques in a Search Engine Marketing (SEM) process and as part of an internet marketing strategy, which can be utilized for enhancing a website's ranking and bringing about web dominance. The goal of SEO is to increase visibility in organic (non-paid) search engine results. Realizing that the web offers enormous and alluring marketing potential, commercial and non-profit organisations from various industries and of all sizes appear to be highly focused on the online market with their projects and ideas.

	on behalf of clients, and by staff members who carry out internal SEO services. The main aim of the author in the paper is to represent the scenario ofSEO market in India.	billions of web pages of interconnected documents. When search engines discover these pages, they next interpretthe code from them and save chosenportions in enormous hard drives, ready to be retrieved later for a search query.	become more important, and thoseseeking placement on a national or global scale will have to focus on local search methodsto show up in an area outside of theirlocal market.
The Application of Search Engine Optimization in Internet Marketing	Author's research shows that SEO is one of the potential techniques of internet marketing which allows businesses to showtheir online by raising their internet rankings andoptimising visitor flow, businesses may increase their online visibility. Therefore, the purpose ofthis study is to discover how SEO affects online marketing in the contemporary day.	This research has shown in thelast decade of the 20th century, the landscape of the search engine was highly competitive. In the beginning, onpage activities were considered as theonly channel to perform any kind of SEO later on it expanded.	This paper has shown that SEO is one of the significant applications of internet marketing that can aid to enhance the company's website and its online presence both off- page and on-page toraise its search engine rating.
A study of Impact of SearchEngine Optimization to Internet Marketing Strategy	Author's research explored free SEO and social media plug-ins andcompare their performance in increasing incoming web traffics.	Researcher has used three publisher websites: the normalwebsite without any SEO installed on it, the customized website with basic SEO configuration and social mediaplug-in.	This paper has shown that visitorsof customized website coming from 28 countries, whereas visitors ofnormal website coming from only 12 countries. It affirms that combining social media plug-in and SEO offers customers a greaterrange of access.

IV. CONCLUSION

The web search tool is truly a valuable instrument in the present period of the web. There are a significant number of web search tools accessible in the market, yet the most famous web crawler is Google. So, for getting the highest outcomes on the web, we need to use the website improvement strategy. Both the on-page and off-page website streamlining strategies are significant for a better item. In the three kinds of SEO, the White Hat SEO strategy is the best and long term also. The cycle includes a web crawler arachnid downloading a page and putting away it on the web crawler's worker, where a subsequent program, known as an indexer, removes different data about the page, for example, the words it contains and where these are situated, just as any weight for explicit words, and all connections the page contains, which are at that point put into a scheduler for slithering at a later date.

ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.538
Volume 10 Issue XII Dec 2022- Available at www.ijraset.com

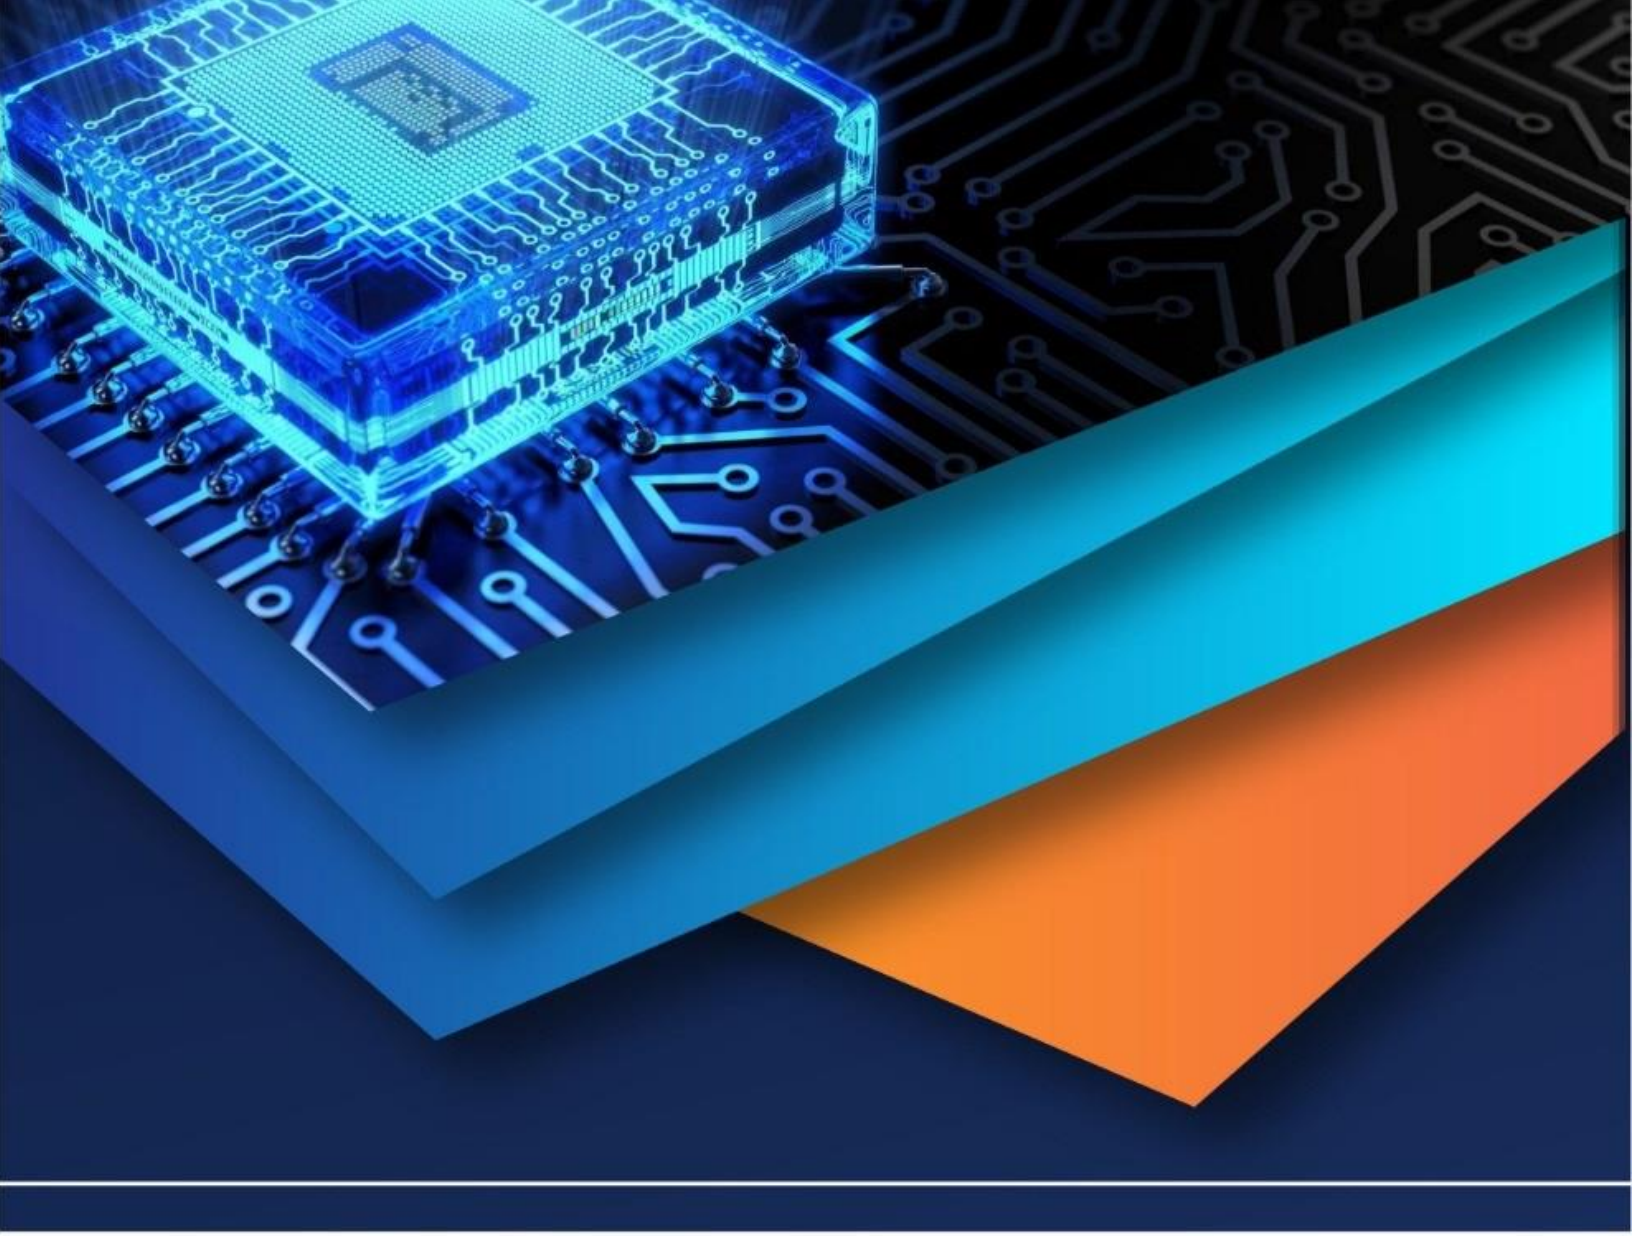

Site proprietors began to perceive the estimation of having their destinations exceptionally positioned and obvious in web search tool results, setting out freedom for both white cap and dark cap SEO professionals. Web pages that contain the words that your intended audience is composing into greater search queries have more visibility than pages that contain next to zero keywords.

How your website pages are connected likewise influences your webpage's web index perceivability. If web search tool spiders can discover your pages rapidly and effectively, your webpage has a vastly improved possibility of showing up at the highest point of list items.

If two sites have a similar book segment and connection part "loads," the site that ends clients click the most will typically rank higher. Once in a while, a mainstream site will reliably rank higher than sites that utilize a lot of keywords. Consequently, building a site that requests to both index editors and your intended interest group is vital for most extreme web search tool perceivability.
