Abstract: *Career plays an important role in each and every individual. Even though there are many applications for Career Counselling we feel that for a career of an individual rather than presenting in an application we feel that he himself experience the various modules of careers to take his right path to the Career. We also feel one cannot decide one's career as Doctor , Engineer ,Lawyer etc .It should be on the choice of an individual. Here we have Presented a Motivational Application to careers because we are not counselling them we are saying the facts to them.*

Keywords: *Career, Path, Destination, Ensemble.*

I. INTRODUCTION

Career plays a key role in every individual. Now a days a person is seeking for the question What is your next plan? This is the major question all the individuals are playing now a days and to answer that question begins our research. A re-search word says to search again. Even though we are M.C.A graduates we are now travelling towards research without Ph.D but with a thesis we have enquired various people Future plans and we have motivated them by using smart way of goal setting.

- A. Smart goal settin
- B. S-specifi
- C. M-measurabl
- D. A-achievable
- E. R-resourceful
- F. T-time out

So this sort of analysis must be done while we update something and by attaining some knowledge regarding the goal. This type of formative and summative assessment in the counselling is required for a student or any person who wishes to change their learning approach.

The reason for which a student opts for various careers is that he/she needs to reach their destination or the goal The Smart way of goal setting is a process that needs to be explained by a Human Resource , a teacher but not a computer because Computer itself is an Innovative thought generated by a human.

To evolve the thresholds technology in the major aspects that mainly deals with the resolution of various problems in our society.

The major problems that are prevailing in our society deals with the following aspects

- 1) Education
- 2) Health and medicine
- 3) E-commerce
- 4) Food & agriculture
- 5) Chemical industries
- 6) Biotechnology

Coming to our scenario from the above discussion Education plays a key role in each and every individual aspects. There is a sin that suggests the apt definition of Education

G. "Knowledge without character"

This is a completely different topic from our scenario but here we are going to make this technology to break up the boundaries of people of rural areas as well as to show them a path to reach their destinations. As Computer Networks is one of the subject that deals with the routing protocols.

Here also we are going to use various aspects of such protocols to show a career to an individual. As Career is a significant aspect that plays a key role in the life of an individual. We Presented an approach along with the audio video aids so that the person using this technology will not get boredom.

II.LITERATURE SURVEY

Our Survey starts from our college students that too MCA students of 2nd and 3rd years in order to know their intentions towards their Careers but we have got a negative vision in this survey that takes us towards the positive approach of learning. Many of the students suggest the following way towards the career.

A. *If A FAILS opt B if B FAILS opt C IF C FAILS opt D.*

This suggest their intention towards their own career building but the thing here is they need to build their own career on their choice.

B. *“A Career must be a Choice but Choices Should not be a Career”*

This is the aspect that makes us to realize a fact that in spite of being technical people why can't we develop a technology for careers?

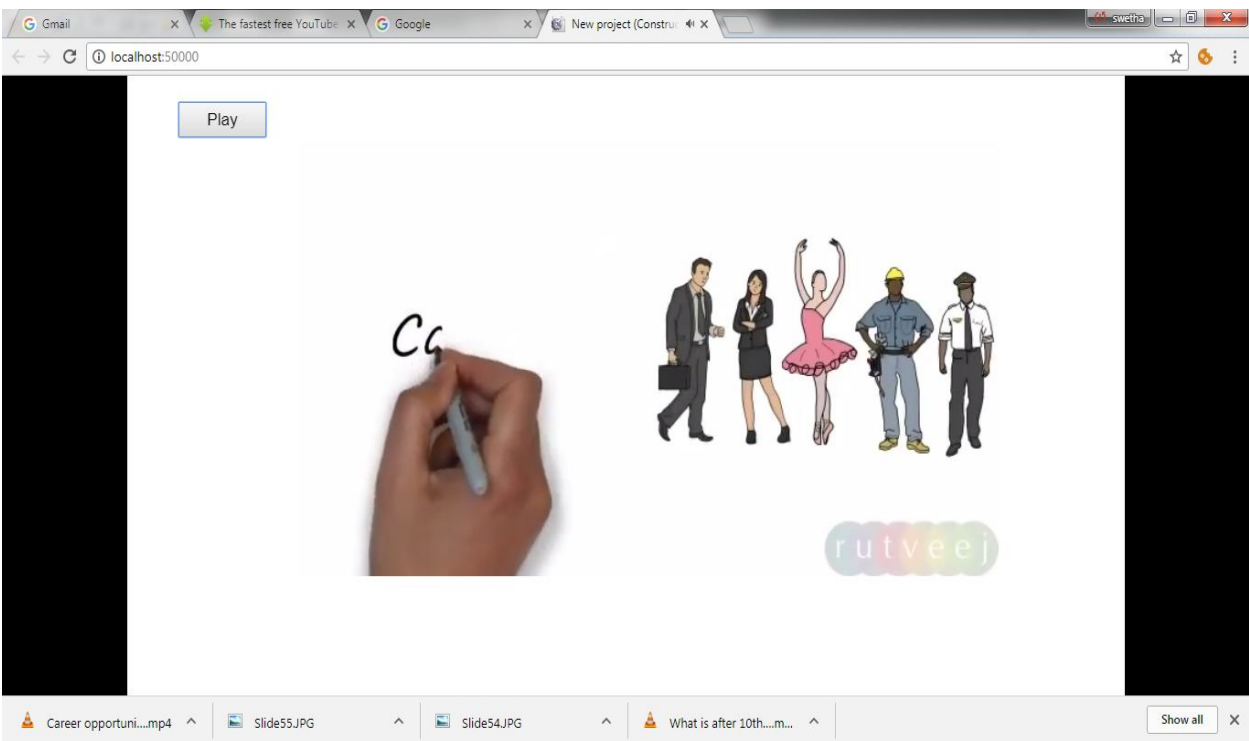

In this scenario the meaning of CAN'T CAN BE DEFINED AS FOLLOWS:

C. *Can't-Can Know Your Talent*

This realizes that we too can build a technology that deals with the careers. We know the talent that lies within us.

III.EXPERIMENT

The above are the screen shots that suggest our experiment and they suggest that a person can undergo various careers to know his own path. We presented this approach as an initial step by using a software tool called Construct2D and this tool helps to create navigation of web pages easily.

A person using this technology can use to select his own career by clicking on the above mentioned careers and the navigation process starts when he/she clicks on the careers and this takes a person using this sort of technology to get navigated to next page and thereby knowing the information about notification of the exam date, fee etc. By clicking on the video button the person can see his career paths on that particular domain of the career that is selected by the person.

The video may be a video of a student idea towards his/her career and it might be the path that ensembles all his visions to get and set a plan that makes him to travel forward towards his/her goal.

Setting A Goal Is Not An Easy Task To Deal With Because Goal Setting Should Be Followed By All The Norms That Are Discussed In The Smart Method. So, We would like to inculcate this technology to the people with the human resources. We feel this technology can be transferred to the readers to be the members to have an enforcement to take this application to the layman.

IV. CONCLUSION

We would like to conclude that this is just a beginning of the application. As our application consists of a Multimedia technology we can gather the videos of experts in Career Counseling and capture them in this application and also we can generate this application in the form of an APP by using Intel Xdk tool that is available to generate an application into apk.

V. ACKNOWLEDGMENT

We would like to thank Dr.D.Haritha ,Head of the Department of C.S.E for giving immense support to gather the ideas of people.
We would like to thank A.Radikha,Sr.Assistant Professor, Department of C.S.E for making our plan into execution.
We would like to thank N.Sindhura ,Assistant Professor ,Department of M.C.A for giving us valuable suggestions to gather ideas.
We would like to thank M.Rithvik,Assistant Professor,Department of C.S.E for being with us until we learn the technology to get evaluated

Finally we would like to thank all the faculty of CSE Department in giving their support and assistance in this project.
We would like to thank all the students of M.C.A both first years and 2nd years for active participation in the survey.
