# Special Dio3-Tuples for Pronic Number -I 

S.Vidhya ${ }^{1}$, G.Janaki ${ }^{2}$<br>${ }^{1,2}$ Department of Mathematics, Cauvery College for Women, Trichy-18, Tamilnadu, India.

#### Abstract

We search for three distinct polynomials with integer coefficients such that the product of any two members of the set added with their sum and increased by a non-zero integer (or polynomial with integer coefficients) is a perfect square. Keywords: NDio 3-tuples, Pronic numbers, Polynomials.

Notation: $\operatorname{PrO}_{n}=$ Pronic number of rank $n$.

## I. INTRODUCTION

Many mathematicians considered the problem of the existence of Diophantine quadruples with the property $D(n)$ for any arbitrary integer $n[1]$ and also for any linear polynomials $n$. Further, various authors considered the connections of the problem of Diaphanous, Davenport and Fibonacci numbers in [2-14].
In this communication, we present a few special dio 3-tuples for Pronic numbers of different ranks with their corresponding properties.

## II. BASIC DEFINITION

A set of three distinct polynomials with integer coefficients $\left(a_{1}, a_{2}, a_{3}\right)$ is said to be a special dio 3-tuple with property $D(n)$ if $a_{i} * a_{j}+\left(a_{i}+a_{j}\right)+n$ is a perfect square for all $1 \leq i<j \leq 3$, where $n$ may be non-zero integer or polynomial with integer coefficients.

## A. Method of Analysis

1) Case 1: Construction of Dio 3-tuples for Pronic number of rank $n-1$ and $n$.

Let $a=\operatorname{Pro}_{n-1}, \quad b=\operatorname{Pro}_{n}$ be Pronic number of rank $n-1$ and $n$ respectively such that $a b+(a+b)+n^{2}+1$ is a perfect square say $\alpha^{2}$.
Let $c$ be any non-zero integer such that

$$
\begin{align*}
& a c+(a+c)+n^{2}+1=\beta^{2}  \tag{1}\\
& b c+(b+c)+n^{2}+1=\gamma^{2} \tag{2}
\end{align*}
$$

On solving equations (1) and (2), we get

$$
\begin{equation*}
(a-b)+\left(n^{2}+1\right)(b-a)=(b+1) \beta^{2}-(a+1) \gamma^{2} \tag{3}
\end{equation*}
$$

Assume $\beta=x+(a+1) y$ and $\gamma=x+(b+1) y$ and it reduces to

$$
\begin{equation*}
x^{2}=(a+1)(b+1) y^{2}+n^{2} \tag{4}
\end{equation*}
$$

The initial solution of the equation (4) is given by

$$
x_{0}=n^{2}+1, \quad y_{0}=1
$$

Therefore,

$$
\beta=2 n^{2}-n+2
$$

On substituting the values of $a$ and $\beta$ in equation (1), we get

$$
c=4 n^{2}+3=\operatorname{Pro}_{2 \mathrm{n}-2}+6 n+1
$$

Hence, The triple $\left(\operatorname{Pro}_{n-1}, \operatorname{Pro}_{n}, \operatorname{Pro}_{2 n-2}+6 n+1\right)$ is a Dio 3-tuple with property $D\left(n^{2}+1\right)$.
A few numerical examples of the Dio 3-tuples satisfying the above property are mentioned below.

Table 1

| $n$ | $(a, b, c)$ | $D(n)$ |
| :---: | :---: | :---: |
| 1 | $(0,2,7)$ | 2 |
| 2 | $(2,6,19)$ | 5 |
| 3 | $(6,12,39)$ | 10 |
| 4 | $(12,20,67)$ | 17 |
| 5 | $(20,30,103)$ | 26 |

We present below the Dio 3-tuple for Pronic number of the rank mentioned above with suitable properties.
Table 2

| $a$ | $b$ | $c$ | $D(n)$ |
| :---: | :---: | :---: | :---: |
| $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+6 n+3$ | $D\left(3 n^{2}+4\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+6 n+5$ | $D\left(5 n^{2}+9\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+6 n+7$ | $D\left(7 n^{2}+16\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+6 n+9$ | $D\left(9 n^{2}+25\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+6 n+11$ | $D\left(11 n^{2}+36\right)$ |

In general, it is noted that the triple $\left(\operatorname{Pro}_{n-1}, \operatorname{Pro}_{\mathrm{n}}, \operatorname{Pro}_{2 \mathrm{n}-2}+6 n+2 k+1\right)$ is a Dio 3-tuple with the property $D\left((2 k+1) n^{2}+t^{2}\right)$, where $k=2,3,4, \ldots$ and $\mathrm{t}=1,2, \ldots$
2) Case 2: Construction of Dio 3-tuples for Pronic number of rank $n-2$ and $n$.

Let $a=\operatorname{Pro}_{n-2}, \quad b=\operatorname{Pro}_{n}$ be Pronic number of rank $n-2$ and $n$ respectively such that $a b+(a+b)+2 n^{2}-2 n-1$ is a perfect square say $\alpha^{2}$.

Let $c$ be any non-zero integer such that

$$
\begin{align*}
& a c+(a+c)+2 n^{2}-2 n-1=\beta^{2}  \tag{5}\\
& b c+(b+c)+2 n^{2}-2 n-1=\gamma^{2} \tag{6}
\end{align*}
$$

On solving equations (5) and (6), we get

$$
\begin{equation*}
(a-b)+\left(2 n^{2}-2 n-1\right)(b-a)=(b+1) \beta^{2}-(a+1) \gamma^{2} \tag{7}
\end{equation*}
$$

Assume $\beta=x+(a+1) y$ and $\gamma=x+(b+1) y$ and it reduces to

$$
\begin{equation*}
x^{2}=(a+1)(b+1) y^{2}+2 n^{2}-2 n-2 \tag{8}
\end{equation*}
$$

The initial solution of the equation (8) is given by

$$
x_{0}=n^{2}-n+1, \quad y_{0}=1
$$

Therefore,

$$
\beta=2 n^{2}-4 n+4
$$

On substituting the values of $a$ and $\beta$ in equation (5), we get

$$
c=4 n^{2}-4 n+5=\operatorname{Pro}_{2 n-2}+2 n+3
$$

Hence, The triple $\left(\operatorname{Pro}_{n-2}, \operatorname{Pro}_{\mathrm{n}}, \operatorname{Pro}_{2 \mathrm{n}-2}+2 n+3\right)$ is a Dio 3-tuple with property $D\left(2 n^{2}-2 n-1\right)$.
A few numerical examples of the Dio 3-tuples satisfying the above property are mentioned below.

Table 3

| $n$ | $(a, b, c)$ | $D(n)$ |
| :---: | :---: | :---: |
| 1 | $(0,2,5)$ | -1 |
| 2 | $(0,6,13)$ | 3 |
| 3 | $(2,12,29)$ | 11 |
| 4 | $(6,20,53)$ | 23 |
| 5 | $(12,30,85)$ | 39 |

We present below, a few Dio 3-tuple for Pronic number of rank mentioned above with suitable properties.
Table 4

| $a$ | $b$ | $c$ | $D(n)$ |
| :---: | :---: | :---: | :---: |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+2 n+5$ | $D\left(4 n^{2}-4 n+2\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+2 n+7$ | $D\left(6 n^{2}-6 n+7\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+2 n+9$ | $D\left(8 n^{2}-8 n+14\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+2 n+11$ | $D\left(10 n^{2}-10 n+23\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}+2 n+13$ | $D\left(12 n^{2}-12 n+34\right)$ |

3) Case 3: Construction of Dio 3-tuples for Pronic number of rank $n-2$ and $n-1$.

Let $a=\operatorname{Pro}_{n-2}, \quad b=\operatorname{Pro}_{n-1}$ be Pronic number of rank $n-2$ and $n-1$ respectively such that $a b+(a+b)+\left(-n^{2}+2 n-1\right)$ is a perfect square say $\alpha^{2}$.
Let $c$ be any non-zero integer such that

$$
\begin{gather*}
a c+(a+c)+\left(-n^{2}+2 n-1\right)=\beta^{2}  \tag{9}\\
b c+(b+c)+\left(-n^{2}+2 n-1\right)=\gamma^{2} \tag{10}
\end{gather*}
$$

On solving equations (9) and (10), we get

$$
\begin{equation*}
(a-b)+\left(-n^{2}+2 n-1\right)(b-a)=(b+1) \beta^{2}-(a+1) \gamma^{2} \tag{11}
\end{equation*}
$$

Assume $\beta=x+(a+1) y$ and $\gamma=x+(b+1) y$ and it reduces to

$$
\begin{equation*}
x^{2}=(a+1)(b+1) y^{2}+\left(-n^{2}+2 n-2\right) \tag{12}
\end{equation*}
$$

The initial solution of the equation (12) is given by

$$
x_{0}=n^{2}-2 n+1, \quad y_{0}=1
$$

Therefore,

$$
\beta=2 n^{2}-5 n+4
$$

On substituting the values of $a$ and $\beta$ in equation (9), we get

$$
c=4 n^{2}-8 n+5=\operatorname{Pro}_{2 n-2}-2 n+3
$$

Hence, The triple $\left(\operatorname{Pro}_{n-2}, \operatorname{Pro}_{n-1}, \operatorname{Pro}_{2 n-2}-2 n+3\right)$ is a Dio 3-tuple with property $D\left(-n^{2}+2 n-1\right)$. A few numerical examples of the Dio 3-tuples satisfying the above property are mentioned below.

Table 5

| $n$ | $(a, b, c)$ | $D(n)$ |
| :---: | :---: | :---: |
| 1 | $(0,0,1)$ | 0 |
| 2 | $(0,2,5)$ | -1 |
| 3 | $(2,6,17)$ | -4 |
| 4 | $(6,12,37)$ | -9 |
| 5 | $(12,20,65)$ | -16 |

We present below, a few Dio 3-tuple for Pronic number of rank mentioned above with suitable properties.
Table 6

| $a$ | $b$ | $c$ | $D(n)$ |
| :---: | :---: | :---: | :---: |
| $\operatorname{Pro}_{n-2}$ | $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}-2 n+5$ | $D\left(n^{2}-2 n+2\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}-2 n+7$ | $D\left(3 n^{2}-6 n+7\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}-2 n+9$ | $D\left(5 n^{2}-10 n+14\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}-2 n+11$ | $D\left(7 n^{2}-14 n+23\right)$ |
| $\operatorname{Pro}_{\mathrm{n}-2}$ | $\operatorname{Pro}_{\mathrm{n}-1}$ | $\operatorname{Pro}_{2 \mathrm{n}-2}-2 n+13$ | $D\left(9 n^{2}-18 n+34\right)$ |

## III. CONCLUSION

In this paper we have presented a few examples of constructing a special Dio 3-tuples for Pronic number of different ranks with suitable properties. To conclude one may search for Dio 3-tuples for higher order Pronic number with their corresponding suitable properties.
