**Abstract:** 1-[3'-(2''-n-butylbenzofuran-3''-yl)-5'-aryl-4, 5-dihydro-pyrazol-1'-yl-ethanones (4a-4k) have been synthesized. The synthesized products have been evaluated their antimicrobial activity against Gram+ve, Gram-ve bacteria and fungi. All the synthesized products were assigned with IR, <sup>1</sup>HNMR, Mass Spectra, TLC, and elemental analysis. Some of the products showed moderate activity, compared with known standard drugs.

## I. INTRODUCTION

Acetylpyrazoline derivatives showed a vital role largely due to the wide ranging of therapeutic activities. With a view of getting biodynamic activities such as antimicrobial<sup>1</sup>, antiinflammatory<sup>2-3</sup>, antiallergic<sup>4</sup>, anticonvulsant<sup>5</sup>, antidiabetic<sup>6</sup>, antiimplantation<sup>7</sup>, antitumor<sup>8</sup>, antineoplastic<sup>9</sup>, analgesic<sup>10-11</sup>, fungicidal<sup>12-13</sup>, bactericidal<sup>14-15</sup>, herbicidal<sup>16</sup>, cardiovascular<sup>17</sup>, antiamebic<sup>18</sup>, tranquiliser<sup>19</sup> etc. In this fact to interesting therapeutic activities, it appeared to interest to synthesized some new Pyrazolines (4a-4k) have been synthesized by the condensation of condensation of (E)-1-(2'-n-butylbenzofuran-3'-yl)-3-aryl-prop-2-ene-1-ones with hydrazine hydrate and glacial acetic acid. Chalcones of (3a-3k) have been synthesized by the condensation of 1-(2'-n-butylbenzofuran-3'-yl)ethanone with aromatic aldehyde in the presence of aqueous NaOH, 1-(2'-n-butylbenzofuran-3'-yl)ethanone have been synthesized by the acetylation of 2-n-butylbenzofuran with acetyl chloride in the presence of anhydrous AlCl<sub>3</sub>. All the products (4a-4k) were assigned with IR, <sup>1</sup>HNMR, Mass data, TLC and Elemental analysis. The physical data recorded in Table no: I. Antimicrobial activity recorded in Table no: II and comparable antimicrobial of compared with known standard drugs represented in Table no: III.

### A. Antimicrobial Activity:

All the products (4a-4k) were tested for their antimicrobial activity by Cup-plate method<sup>20</sup> against the Gram positive Bacteria Bacillus megaterium; S.aureus, Gram negative bacteria Escherichia coli, S.Taphimarium and for antifungal activity against Aspergillus niger, Anrobacter awamori at a concentration of 50µg/ml, using DMF as a solvent. After 24hrs of incubation at 37°C, the zone of inhibition were measured in mm. The activity was compared with known standard drugs viz. Ampicillin, Chloramphenicol, Norfloxacin, Fluconazole at the same concentration (50µg/ml) which is represented in Table no II. All the synthesized compounds (4a-4k) showed moderate to good and remarkable activities with compared to known standard drugs at same concentration which is represented in Table no III.

## II. REACTION SCHEME

### III. EXPERIMENTAL SECTION

All the melting points were measured in open glass capillary method and are uncorrected. IR absorption Spectra (in  $\text{cm}^{-1}$ ) were recorded on a SHIMADZU IR-435 spectrophotometer using KBr pellet method,  $^1\text{H}$ NMR spectra on BRUKER (300MHz) spectrometer using DMSO as internal standard (chemical shift in  $\delta$ ppm) and Mass spectra on a Jeol-JMSD 300 Mass spectrometer at 70ev. The compounds were routinely checked by TLC method using silica gel G.

#### A. Synthesis of 1-(2'-n-butylbenzofuran-3'-yl)ethanone

Methylene dichloride (20ml) was chilled to  $0-5^\circ\text{C}$ . Anhydrous Aluminium chloride (2.0gm, 0.015mol) and acetyl chloride (1.0ml, 0.15mol) were added slowly drops by drops at  $0-5^\circ\text{C}$ . Reaction mixture was stirred at  $0-5^\circ\text{C}$  for 30minutes. 2'-n-butylbenzofuran (1.74gm, 0.01mol) was added slowly to the reaction mass at  $0-5^\circ\text{C}$ .

After completion of addition, temperature of reaction mass was raised up to  $30-35^\circ\text{C}$ . Reaction mixture was stirred at  $30-35^\circ\text{C}$  for 4hrs. After completion of the reaction, the reaction mixture was poured in to ice cold water. Layers were separated. Methylene dichloride layer was washed with water. To get required product from Methylene dichloride layer, Methylene dichloride distilled out under reduced pressure. 2-n-butylbenzofuran-3-yl ethanone oily product is formed. Yield: 85.00%, B.P.:  $87^\circ\text{C}$
