## Avifaunal Diversity of Integral University Campus, Lucknow, India

Gurpreet Singh<sup>1</sup>, Monowar Alam Khalid<sup>2</sup>

<sup>1, 2</sup>Department of Environmental Science, Integral University, Kursi Road, Lucknow, U.P., India

Abstract: Integral University at Lucknow is a lush green campus of nearly 120 acres, preferred by number of bird species at its different types of habitat like trees, bushes, grasses, grounds and buildings etc. Study was conducted for two years through standard methods to collect information on different species of birds present in the campus. A total of eighty three species of birds belonging to fifteen orders and forty three families were recorded at the university campus. Majority of species were observed in the order Passeriformes and family Accipitridae and falling under Scheduled-IV category of IUCN i.e. of Least Concern. On the basis of their occurrence in the campus, around 60% of the bird species were found to be common, 30% visitor and 10% were rare. Feeding habits showed dominance of Carnivorous (34%) and Insectivorous (27%) bird species. Keywords: Avifaunal, Diversity, Composition, Abundance, Family.

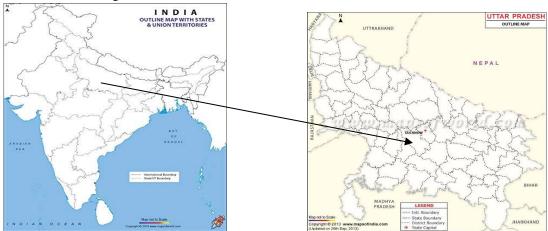

## I. INTRODUCTION

University campus plays an important role in providing ambient environment not only to students and faculty but can be the areas of conserving floral and faunal biodiversity especially the trees and the avifauna. The presence of avifauna or birds in an area is an indicator of good health of an ecosystem. Importance of avifauna increases manifold due to ongoing rampant urbanization, and the climate change. India is blessed with rich avifaunal diversity, which constitutes nearly 13% of the world's bird species with its nearly 1300 recorded bird species (Javed and Kaul, 2000; Grimmett et al, 2011). As per State of India's Bird Report 2020 (SoIB, 2020), there is a decline in bird population in India, as more than 50% of Indian bird species (out of total 867 species) assessed have registered a decline during the last few decades. The total bird species found in Uttar Pradesh are nearly 550 (UPSBdB, 2014). A number of studies have documented avifaunal diversity at various university campuses in India (Amita et al, 2012; Tandon et al., 2015; Snehal et al., 2015; Vinay et al., 2017; Manoj et al., 2017; Kaushal et al., 2018; Singh et al., 2018; Pragasan and Madesh, 2018; Alok and Dhuria, 2019; Iqram et al., 2019), where bird species were observed it different habitats.

## II. STUDY AREA

The study area includes nearly 120 acres main campus of Integral University (Photo 1 & Map 2), Lucknow (Lat 26.9585° N & Long 80.9992° E), Uttar Pradesh, India (Map 1). The campus is situated in close proximity to the Kukrail Reserve Forest (Map 3) towards its South. University campus has a good green cover with number of trees, bushes, sprawling grass lawns etc. These varied habitats like trees, lawns, buildings etc provide refuge to a number of bird species. The campus has good presence of trees like *Ficus glomerata, Tectona grandis, Delonix regia, Grewia abutilifolia, Anthocephalus cadamba, Azadirachta indica, Semi Casia, Psidium guajava* and *Mangifera indica* etc.

In addition to above trees, there are good number of shrubs and

## **III. MATERIALS AND METHODS**

Survey was conducted in the study area for recording the avifaunal diversity using line transects and point count methods and random sightings within the campus for two years during September 2016 to August 2018 covering winter, summer and monsoon seasons. Birds were identified and recorded using Binoculars and Camera for close observation and through photographs for their identification. Observations were made through visual sightings and also identified acoustically from the bird calls both in the morning and evening for their presence on trees, bushes, grass lawns, buildings etc.

Nikon P900 camera was used to collect photographic evidences of birds and bird identification was confirmed using guide books like "Birds of the Indian Subcontinent" (Grimmett et al., 2011) and "The book of Indian birds" (Ali S., 2002).

## **IV. RESULTS AND DISCUSSION**

The result showed a rich avifaunal diversity in the campus as nearly 83 birds species belonging to 15 Order and 43 Families (Table 1) were observed during the study period. Passeriformes was the dominant order having nearly 40 species of birds (Figure 1) and Ardeidae was the most dominant family (Figure 2).

Bird Family	Common Name of Bird	Scientific Name	IUCN Category	Feeding behaviour	Abundance
Accipitridae	Black Eared Kite	Milvus lineatus	Least Concern	Carnivorous	Common
	Black Kite	Milvus migrans	Least Concern	Carnivorous	Common
	Egyptian Vulture	Neophron percnopterus	Endangered	Carnivorous	Common
	Oriental Honey Buzzard	Pernis ptilorhynchus	Least Concern	Carnivorous	Visitor
	Shikra	Accipiter badius	Least Concern	Carnivorous	Common
Acrocephalidae	Booted Warbler	Iduna caligata	Least Concern	Insectivorous	Common
Alcedinidae	White Throated Kingfisher	Halcyon smyrnensis	Least Concern	Carnivorous	Common
Anatidae	Lesser Whistling Duck	Denrocygna javanica	Least Concern	Omnivorous	Visitor
Ardeidae	Black Bittern	Dupetor flavicollis	Least Concern	Carnivorous	Visitor
	Black Crowned Night Heron	Nycticorax nycticorax	Least Concern	Carnivorous	Visitor
	Cattle Egret	Bubulcus ibis	Least Concern	Carnivorous	Common
	Grey Heron	Ardea cinerea	Least Concern	Carnivorous	Rare
	Indian Pond Heron	Ardeola grayii	Least Concern	Carnivorous	Common
	Intermediate Egret	Mesophoyx intermedia	Least Concern	Carnivorous	Visitor
	Little Egret	Egretta garzetta	Least Concern	Carnivorous	Visitor
Bucerotidae	Indian Grey Hornbill	Ocyceros birostris	Least Concern	Omnivorous	Visitor
Charadriidae	Red Wattled Lapwing	Vanellus indicus	Least Concern	Insectivorous	Common
Cisticolidae	Ashy Prinia	Prinia socialis	Least Concern	Insectivorous/ Nectivorous	Common
	Grey Breasted Prinia	Prinia hodgsonii	Least Concern	Insectivorous/ Nectivorous	Common
Columbidae	Common Pigeon	Columbia livia	Least Concern	Granivorous	Common

Table 1: List of bird species observed in the Integral University campus

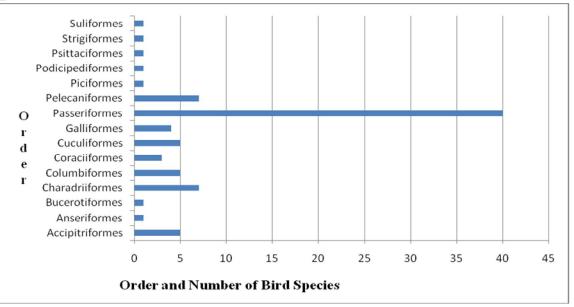

Figure 1: Number of bird species in each Order

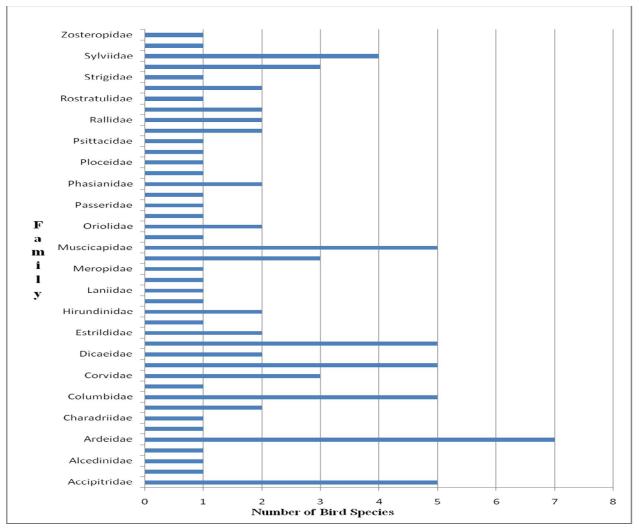

Figure 2: Family wise composition of bird species

## International Journal for Research in Applied Science & Engineering Technology (IJRASET) ISSN: 2321-9653; IC Value: 45.98; SJ Impact Factor: 7.429 Volume 8 Issue IX Sep 2020- Available at www.ijraset.com

The avifaunal species composition based on feeding behavior was found to be Carnivorous (34%), followed by Insectivorous (27%), Omnivorous (21%), Granivorous (11%) and Frugivorous (7%) (Figure 3). Majority of bird species fell under Scheduled-IV category of IUCN that is of least Concern.

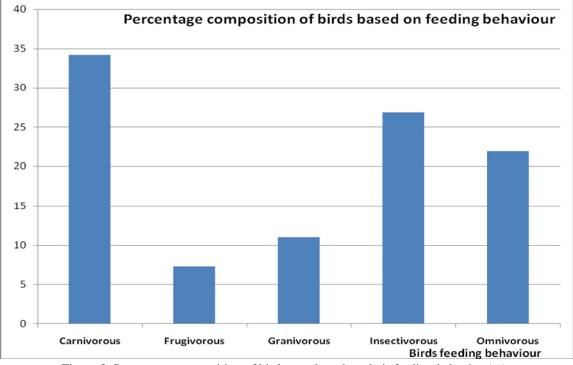

Figure 3: Percentage composition of bird types based on their feeding behavior (%).

Avifaunal abundance recorded in the campus was mainly under the category of Common birds (60%), followed by Visitor (30%) and Rare (10%) birds (Figure 4). The dominant common birds found in the campus were Common Pigeon, House Crow, Indian Jungle Crow, Cattle Egret, Black Kite, Wire Tailed Swallow, Red Rumped Swallow, Green Bee Eater, White Browed Wagtail, Rose Ringed Parakeet, Red Whiskered Bulbul, Common Myna etc. Few visitor birds observed were Oriental Honey Buzzard, Black Crowned Night Heron, Common Hawk Cuckoo, Pied Cuckoo, Yellow Wagtail, Baya Weaver etc. Proximity to Kukrail forests is also aiding in observing visitor and rare birds in the campus in few seasons.

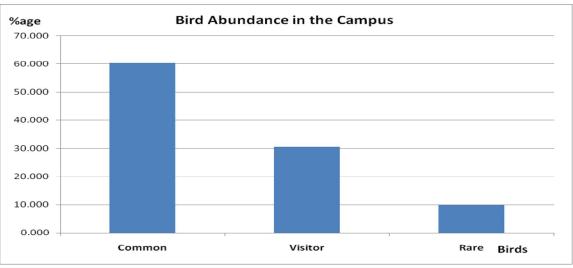

Fig. 4: Bird abundance observed in the Campus.

### V. CONCLUSION

The campus showed a rich and diverse presence of nearly 83 species of birds in its varied habitats. Various authors have confirmed that birds are ecological indicators (Padoa-Schioppa et al, 2006; Gregory et al, 2003) of ecosystem and green spaces in the urban areas have immense importance in conservation of biodiversity (Khera et al, 2009; Mason, 2006; Alvey, 2006 etc). In that context, Integral University campus provides safe and excellent habitats to the avifauna as evident from its rich species diversity. Current study will form the baseline for conducting further studies on bird abundance, species richness etc in the campus.

### VI. ACKNOWLEDGEMENTS

The authors are thankful to Integral University authorities for providing all needful help required for the study.
