Relation Between Nature, Time Travel Man & Future Computer

Arvind Kumar Paswan
U.G. Student, Department of Civil Engineering, Buddha Institute of Technology (AKTU), Gida, Gorakhpur, Uttar Pradesh, India.

Abstract: Every - thing is possible in this universe, as we know that energy / atom can neither be created nor destroy & energy can be transfer from one form to another form. So, on the basis of this theory – i will try to search our past, present & future also, with some modification in our atmosphere and to make a future computer.
Keywords: atom, gases, programming code, frequency, conversion

I. INTRODUCTION

I am asking with everybody i.e, what is the whole universe? What is the actual state(Solid, liquid or gas) of it? Then, you can definitely find that everything is the collection of gas. According to science, in the starting of earth or earth formation earth is form of bundle of gas and initially it is too much hot and after long year the temperature of earth was maintain. No. of living creature increases at the rate of maintaining / cooling temperature.

Future computer can be prepare or make, if we can think and do like following – with the help of future computer we can save to the trees – plants, living - non-living things, also know about birth and death, seasons can also be identified and within a certain time we can manage or change in that, according to requirements. So for it, we should consider to the following points:-

Firstly, we should deeply understand about our surrounding environment, moistures and presentation of gases in atmosphere, then analysis them and try to insert the accurate and verified or proved code in the gases which is present in environment. If your coding is too much strong and in a proper sequence then we can see too the past (reverse life), present (present life), future (future life) of any body as plants – tress, living- non-living, seasons, birth, death, etc we can know about all things.

II. BACKGROUND OR RELATED WORK

As, we know that according to science & holy books –"atom can neither be created nor destroy" & "energy can be transfer from one form to another form" like – if any living body and non-living body burns, then they evaporates in air or change in another form. As, we know about "time travel man" who is mystery for all over the world, but naturally that may be known about nature and natural gases and they have good command on it. So, that man change to himself according to natural gases because natural gases is present in all over the world and that person operate to the gases. So, they can easily move from one place to another place. If we doing the dip study about time travel man then we find that a special type of energy / light is radiated from the body of time travel man.

Now, if we cannot make the future computer with the concept of this research paper, then the concept of "atom can neither be created nor destroy" & "energy can be transfer from one form to another form" will be 100% wrong. If these concept will be fail, then a lot of misbalance will create in education life, research life, scientific concept means it will create like flood in the world and so many theory & concepts will be wrong.

III. PRESENTATION OF THE MAIN CONTRIBUTION OF THE PAPER / SCOPE OF RESEARCH

The main contribution of this research paper is to protect the life of all creatures and control to the hazardous disaster (flood, earthquake, tsunami, etc). We can save to everything with in time. The scope of this research paper will provide the different types of knowledge, answers and many mysterious questions can be solved like of time travel man. For completion of this research paper one special type of instrument is required which can transfer or insert the programming code in atmospheric gasses but these type of instrument is not available in any place because nobody is try to make it. So, there is broad scope in it and its challenging for everybody.

IV. METHODOLOGY AND DISCUSSION

As, you know that planets / universe or galaxies everything in this world is a form of gas. I think gas is that particular matter which

©IJRASET: All Rights are Reserved

cannot be destroy it convert one form to another form. Ex:- In the time of cooking, when water boils then it evaporate the water in form of gas and after cooling it comes in water form and if we can store to that same water in ice / friz then it converts in ice form and when we boil it too much above from its boiling point then we find that it converts in the form of vapour / gas. Nothing will be remain in cetali. If we can burn to the cetali to much above from its boiling points then we can find that cetali also changes in the form of vapour / gas. Here, I am only try to understand you everything in this world is made from gas and according to physical and chemical characterstics of gases or every gas have certain cooling temperature and every gas have different – different cooling temperature.

Ex:- For making new instrument / machine try to gather different variety of parts from different places. After gather each and every parts of the instrument or machine, then try to make new machine or instruments. After complete the duration or time period of the machine or instrument we will try to separate the separate the parts of the machine or instrument. Each and every parts are separate with each other and send all the parts where it can be suitable used now these condition is similar like as initial condition when it was not prepared. Similarly these condition is happen with human body and every parts of the world.

If we are talking about before birth condition and after death condition, I want to talking about formation of body and destruction of body. Means if we can try to reverse it with the help of coding or programming or from any method, then we can find to all parts of the body formation material / substance in the form of gas. If we can deeply understand / study about that matter then we can get a lot of mystery things and we can deeply understand about environment and its formation. Now, try to find out the matter or gases which causes to the formation of universal body's or environmental things.

If we can deeply understand about the disapperence & presence of gases in this universe and if we can control on it with the help of coding or programming then we can solve to the problem of hole in ozone layer. We can able to create the required or essential gases / layer. We can change to any type of temperature and we can be able to convert and control according to requirement.

According to science & old religious books – "atom can neither be create nor destroy "& " energy can neither be create nor destroy but it can be change in other form like gases". After the death of human or living things they are totally mixed in the earth soil and some are changes in the form of gases. Construction of man or baby (child) like – in the presence of better sperm, better food & better environment. Better sperm is form only when in the presence of sunlight and fresh air.

As, we know that science and earlier religious teacher, saints, are believe that if a person can use 100% mind then they can move like god and goddess and can be change our shape, size, position, etc. and they can be converted himself like time travel man i.e., can be move from one country to another country within few seconds and can be know about past, present & future.

Analysis the environment deeply and presence of gasses in it. Before inserting to the coding try to recheck the program.

When we have totally understand to all the proprieties of gases, then one by one we should take to that gases whose presence is very less and which is not more essential for our environment or the present and absent that gases are equal means there is no effect on the environment. So we should choose these type of gases and try to fit or insert the code in that gas and try to control it and try to know all proprieties, separation, combination & mixture of these gases.

It's very dangerous for environment, if we can do something wrong means 0.00000009% coding is defective then nobody can be able to control it and human life may facing dangerous problem. So, we should never add extra in atmospheric gas, we should only try to know its properties and method of control of gases.

After complete analysis to gases try to match the relationship of gases to anybody in this world. If the properties / frequencies of gases will be match to anybody then after some modification of coding we can see to the past present and future life of that body.

Now, before starting to control anybody we should deeply or briefly approx 5-10 times recheck the code and know about every points briefly, then can control it easily.

What, when, where, why, how these 5 questions can complete or solve to the answer of the question, approx 99% question can be solved.

Why gases are not see? According to science – those substance or body which can be seen, then that is present in this world and those substance which cannot be seen then that will not be present. Then according to this theory, why we believe that gases are present in this world while gases are not seen. Air can feel, temperature can feel & in it's the density / amount of water is high, so for it we boil to the water at high temperature then water converts into vapour form or gas form in atmosphere and disappear in atmosphere.

I am only try to understanding you that human body, birth – death, living – non-living, etc, have past, present & future and these are present / dissolve in atmosphere in the form of gas. With the help of appropriate and accurate coding in gases we can find past, present & future of all the body or things. According to science and shaastra everybody says that – " atom can neither be create nor

©IJRASET: All Rights are Reserved

destroy" &" energy can neither be create nor destroy" but it can be change from one form to another form. If we find the causes of disappearance of each gas then we can get the 50% possibility to make the future computer.

V. STEPS TO INSERT / PREPARE THE CODE

Select the area → select the material → select the environmental condition of that particular area → select the condition of materials → select the center and outer part of the selected area → try to know about the gases which is present in that area → try to know about the physical & chemical properties of that particular area of gas → try to search the region of disappearance of gases → try to note / write all the physical 7 chemical properties of all the gases and materials → try to know about the frequency, density, mass, etc., and note on the diary → try to match the frequencies of gases and materials → run the code 5to 6 times in Turbo c++ and get the correct output → try to insert the program in materials → try to move the materials in different direction (up, down, left, right) → try to know about the disappearance of gases → try to make the frequencies of disappearance through coding…… prepare the code according to the requirement.

VI. SOME CODING / PROGRAMMING WHICH IS ESSENTIAL FOR MAKING FUTURE COMPUTER

A. Prepare the program of calculator.
B. Prepare programming of moving (up, down, left, right).
C. Prepare the program of reverse the code.
D. Programming of disappearance/ select object/ exit / appearance of object.
E. Prepare the program to insert in dip of materials or substance.
F. Prepare to catch any frequency
G. Prepare the program which can be able to measuring the speed, and insert the code in any material, etc,.
Summaries all the program and to form a single program in which all the essential program are include and to work according to requirement / input.

VII. RESULTS & CONCLUSION

If we are making such type of device which can implement the program in air or in gases which is present in everywhere, then the possibility for making the future computer is 100% (45% accurate & exact thinking, 45% preparing the accurate & correct coding or programming, 10% implement or insert the program through computer to air).
This research paper is helpful for know about the mystery of time travel man and providing a lot of new knowledge about environment and its materials / gases. A lot of unsolved question or mysterious can be solved through this research paper after completing this research paper we can also know about the real facts of Bermuda triangles, tsunami, earthquakes, etc. if people can prepare to those device which is mostly based on the coding system as- satellite, T.V/ monitor, chatting, communication device, etc. then how it is impossible? It is 100% possible to make the future computer.
